Concurrent Receipt: Background and Issues for Congress

Updated January 17, 2019
**Concurrent Receipt: Background and Issues for Congress**

*Concurrent receipt* refers to the simultaneous receipt of two types of federal monetary benefits: military retired pay and Department of Veterans Affairs (VA) disability compensation. Prior to 2004, existing laws and regulations dictated that a military retiree could not receive two payments from federal agencies for the same purpose. As a result, military retirees with physical disabilities recognized by the VA would have their military retired pay offset or reduced dollar-for-dollar by the amount of their non-taxable VA compensation. Legislative activity on the issue of concurrent receipt began in the late 1980s and culminated in the provision for Combat-Related Special Compensation (CRSC) in the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (P.L. 107-314). Since then, Congress has added Concurrent Retirement and Disability Payments (CRDP) for those retirees with a disability rated at 50% or greater, extended concurrent receipt to additional eligible populations, and further refined and clarified the program.

There are two common criteria that define eligibility for concurrent receipt: (1) all recipients must be military retirees and (2) they must also be eligible for VA disability compensation. An eligible retiree cannot receive both CRDP and CRSC. The retiree must choose whichever is most financially advantageous to him or her and may change the type of benefit to be received during an annual open season.

In FY2017, approximately one-third of the retired military population was receiving either CRSC or CRDP at a cost of $12.4 billion. Nevertheless, there are also military retirees who receive VA disability compensation but are not eligible for concurrent receipt. Determining whether to make some or all of this population eligible for concurrent receipt remains a point of contention in Congress. The Congressional Budget Office (CBO) has estimated that to extend benefits to all veterans who would be eligible for both disability benefits and military retired pay would cost $30 billion from 2015 to 2024. In 2016, CBO estimated that eliminating concurrent receipt would save the government $139 billion between 2018 and 2026.

Introduction

Concurrent receipt refers to the simultaneous receipt of two types of monetary benefits: military retired pay and Department of Veterans Affairs (VA) disability compensation. With several separate programs, varying eligibility criteria, and several eligibility dates, some observers find the subject complex and somewhat confusing. There are, however, two common criteria: first, all recipients are military retirees; second, they are also eligible for VA disability compensation. This report addresses the two primary components of the concurrent receipt program: Combat-Related Special Compensation (CRSC) and Concurrent Retirement and Disability Payments (CRDP). It reviews the possible legislative expansion of the program to additional populations and provides several potential options for Congress to consider.

Background

In 1891, Congress first prohibited payment of both military retired pay and a disability pension under the premise that it represented dual or overlapping compensation for the same purpose. The original law was modified in 1941, and the present system of VA disability compensation offsetting military retired pay was adopted in 1944. Under this system, retired military personnel were required to waive a portion of their retired pay equal to the amount of VA disability compensation, a dollar-for-dollar offset.\(^1\) If, for example, a military retiree received $1,500 a month in retired pay and was rated by the VA as 70% disabled (and therefore entitled to approximately $1,000 per month in disability compensation), the offset would operate to pay $500 monthly in retired pay and the $1,000 in disability compensation. The advantage for the retiree was that VA disability compensation was not taxable. For many years some military retirees and advocacy groups sought a change in law to permit receipt of all, or some, of both payments. Opponents of concurrent receipt frequently referred to it as double dipping, maintaining that it represented two payments for the same condition.

In the FY2003 NDAA (P.L. 107-314), Congress created a benefit known as Combat Related Special Compensation (CRSC). CRSC provided, for certain disabled retirees whose disability is combat-related, a cash benefit financially identical to what concurrent receipt would provide them. The FY2004 NDAA (P.L. 108-136) authorized, for the first time, the phase-in of actual concurrent receipt (now referred to as Concurrent Retirement and Disability Payments or CRDP), and a greatly expanded CRSC program. The FY2005 NDAA (P.L. 108-375) further liberalized the concurrent receipt rules contained in the FY2004 NDAA and authorized immediate concurrent receipt for those rated by the VA totaling 100%. The FY2008 NDAA (P.L. 110-181) expanded concurrent receipt eligibility to include those who are 100% disabled due to unemployability and provided CRSC to those who were medically retired or retired prematurely due to force reduction programs prior to completing 20 years of service. CRDP phase-in was fully implemented by 2014, allowing retirees with a disability rated at 50% or greater to receive full retired pay and full VA disability compensation without an offset.

---

\(^1\) 38 U.S.C. §§5304-5304.
Military Retirement and VA Disability Compensation

An understanding of military retirement, VA disability compensation, and the interaction of these two elements is helpful in discussing concurrent receipt.

Military Retirement

An active duty servicemember becomes entitled to retired pay, frequently referred to as vesting, upon completion of 20 years of service, regardless of age. A member who retires is immediately paid a monthly annuity based on a percentage of their final base pay or the average of their high three years of base pay, depending on when they entered active duty. Retired pay accrues at the rate of 2.5% per year of service for those who have entered the service prior to January 1, 2018, and 2.0% for those entering service on or after January 1, 2018. An alternative retirement option, known as “Redux,” was also available for certain active duty servicemembers, depending on their date of entry.

Reserve Retirement

Reserve component servicemembers also become eligible for retirement upon completion of 20 years of qualifying service, regardless of age. However, their retired pay calculation is based on a point system that results in a number of “equivalent years” of service. In addition, a reserve component retiree does not usually begin receiving retired pay until reaching age 60.

Disability Retirement

While retirement eligibility at 20 years of service is the norm for active component members and age 60 for reserve component members, there are some circumstances that result in earlier retirement. Servicemembers found to be unfit for continued service due to physical disability may be retired if the condition is permanent and stable and the disability is rated by DOD as 30% or greater. These retirees are generally referred to as Chapter 61 retirees, a reference to Chapter 61 of Title 10, which covers disability retirement. As a result, some disability retirees are retired before becoming eligible for longevity retirement while others have completed 20 or more years of service.

---

2 CRS Report RL34751, Military Retirement: Background and Recent Developments, by Kristy N. Kamarck, for a detailed description of active duty retirement.

3 Redux is a reduction of 1% in the multiplier for each year the retirement is less than 30 years of service. This results in 40% of base pay at 20 years of service, 57 ½% at 25 years of service, but the full 75% at 30 and 100% for 40 years of service. After retirement, the annual COLA is also reduced by 1% each year but, there is a recomputation at age 62 when both the multiplier and COLA are adjusted to equal the “High Three” system. To compensate for the reduced annuity and lower COLA rate, members who elect Redux at their 15th year of service receive a taxable $30,000 Career Retention Bonus that can be paid in lump sum or spread over six annual increments.

4 See CRS Report RL30802, Reserve Component Personnel Issues: Questions and Answers, by Lawrence Kapp and Barbara Salazar Torreon.

5 Section 614, P.L. 109-163, January 6, 2006 reduced the age for receipt of retired pay for reserve component members by three months for each aggregate of 90 days of certain types of active duty performed after January 28, 2008. Attempts since then to make this benefit retroactive to September 11, 2001 have not been successful.

A servicemember retired for disability may select one of two available options for calculating their monthly retired pay:

1. **Longevity Formula.** Retired pay is computed by multiplying the years of service times 2.5% or 2.0% (respectively based on a date of entry into service before or after Jan 1, 2018) and then times the pay base.
   
   \[ \text{Monthly Retired Pay} = (\text{years of service} \times 2.5\% \text{ or } 2.0\%) \times (\text{pay base}) \]

2. **Disability Formula.** Retired pay is computed by multiplying the DOD disability percentage by the pay base.\(^7\)
   
   \[ \text{Monthly Retired Pay} = (\text{disability } \% ) \times (\text{pay base}) \]

The maximum retired pay calculation under either formula cannot exceed 75% of base pay.\(^8\) The retired pay computed under the disability formula is fully taxed unless the disability is the result of a combat-related injury. Since the disability percentage method usually results in higher retired pay, it is most commonly selected. Generally, military retired pay based on longevity is taxable. In certain instances, a portion of disability retired pay may be tax-free.

**Temporary Early Retirement Authority (TERA)**

Personnel retired due to force management requirements and before completing 20 years of service are generally referred to as “TERA retirees” because the National Defense Authorization Act for Fiscal Year 1993 granted Temporary Early Retirement Authority (TERA) as a manpower tool to entice voluntary retirements during the drawdown of the early 1990s.\(^9\) This authority was in effect from 1992 to 2001. TERA retired pay is calculated in the same way as longevity retirement, but there is a retired pay reduction of 1% for every year of service below 20.

**VA Disability Compensation**

To qualify for VA disability compensation, the VA must make a determination that the veteran sustained a particular injury or disease, or had a preexisting condition aggravated, while serving in the Armed Forces.\(^10\) Some exceptions exist for certain conditions that may not have been apparent during military service but which are presumed to have been service-connected. The VA has a scale of 10 ratings, from 10% to 100%, although there is no direct arithmetic relationship between the amounts of money paid for each step. Each percentage rating entitles the veteran to a specific level of disability compensation.\(^11\) In a major difference from the DOD disability retirement system, a veteran receiving VA disability compensation can ask for a medical

---

7 10 U.S.C. §1401.
8 10 U.S.C. §1401.
9 Section 4403, P.L. 102-484, October 23, 1992.
10 While any person who has served in the Armed Forces of the United States is regarded as a veteran, a military retiree is someone who has generally completed a full active duty military career (almost always at least 20 years of service), or who is disabled in the line of military duty and meets certain length of service and extent of disability criteria, and who is eligible for retired pay and a broad range of nonmonetary benefits from the Department of Defense after retirement. A veteran is someone who has served in the Armed Forces (in most, but not all, cases for a few years in early adulthood), but may not have either sufficient service or disability to be entitled to post-service retired pay and nonmonetary benefits from DOD. Generally, all military retirees are veterans, but not all veterans are military retirees.
11 All VA disability compensation rates are available at http://www.benefits.va.gov/COMPENSATION/resources_comp01.asp.
reexamination at any time (or a veteran who does not receive disability compensation upon separation or retirement from service can be examined or reexamined later).

All VA disability compensation is tax-free, which makes receipt of VA compensation desirable, even with the operation of the offset. As a general rule of thumb, DOD pays for longevity while the VA pays for disability.

**Interaction of DOD and VA Disability Benefits**

As veterans, military retirees can apply to the VA for disability compensation. A retiree may (1) apply for VA compensation any time after leaving the service and (2) have his or her degree of disability changed by the VA as the result of a later medical reevaluation, as noted above. Many retirees seek benefits from the VA years after retirement for a condition that may have been incurred during military service but that does not manifest itself until many years later. Typical examples include hearing loss, some cardiovascular problems and conditions related to exposure to Agent Orange.

The DOD and VA disability rating systems have much in common, but there are also significant differences. DOD makes a determination of eligibility for disability retirement only once, at the time the individual is separating from the service. Although DOD uses the VA rating schedule to determine the percentage of disability, DOD measures disability, or lack thereof, against the extent to which the individual can or cannot perform military duties. Military disability retired pay, but not VA disability compensation, is usually taxable, unless related to a combat disability.

As a result of the current disability process, a retiree can have both a DOD and a VA disability rating and these ratings will not necessarily be the same percentage. The percentage determined by DOD is used to determine fitness for duty and may result in the medical separation or disability retirement of the servicemember. The VA rating, on the other hand, was designed to reflect the average loss of earning power. Studies over the past several years have consistently recommended a single, comprehensive medical examination that would establish a disability rating that could be used by both DOD and the VA.

The National Defense Authorization Act for Fiscal Year 2008 required a joint DOD and VA report on the feasibility of consolidating disability evaluation systems to eliminate duplication by having one medical examination and a single-source disability rating. As a result, DOD and the VA initiated a one-year pilot program, now called the Integrated Disability Evaluation System (IDES), at the Walter Reed Army Medical Center, the National Naval Medical Center at Bethesda and the Malcolm Grove Medical Center at Andrews Air Force Base. The program was expanded to other sites in 2009 and 2010 and since September 2011, all new disability retirement cases at facilities worldwide have been processed through IDES.

---

12 For a full discussion of the similarities and differences between the DOD and VA disability rating systems, see CRS Report RL33991, *Disability Evaluation of Military Servicemembers*, by Christine Scott and Don J. Jansen.

13 The President’s Commission on Care for America’s Returning Wounded Warriors (commonly referred to as the Dole-Shalala commission) and the Independent Review Group on Rehabilitative Care and Administrative Processes at Walter Reed Army Medical Center and National Naval Medical Center both contained similar recommendations concerning disability processing.

14 Section 1612(a), P.L. 110-181, January 28, 2008.

As IDES streamlined the disability evaluation process, DOD and VA now focus on improving health care data and records sharing, a process deemed “vital to Service members who are leaving the DOD system with complex medical issues and ongoing health care needs.” In September 2018, DOD and VA issued a joint statement indicating their commitment to implement an integrated electronic health system that will allow for seamless sharing of health care data between both departments and aid the disability rating process.

**Combat-Related Special Compensation (CRSC)**

The FY2003 NDAA, as amended by the FY2004 NDAA, authorized Combat-related Special Compensation (CRSC). Military retirees with at least 20 years of service and who meet either of the following two criteria are eligible for CRSC:

- A disability that is “attributable to an injury for which the member was awarded the Purple Heart,” and is not rated as less than a 10% disability by the VA; or
- A disability rating resulting from involvement in “armed conflict,” “hazardous service,” “duty simulating war,” or “through an instrumentality of war.”

This liberal definition of combat-related encompasses disabilities associated with any kind of hostile force; hazardous duty such as diving, parachuting, or using dangerous materials such as explosives; individual training and unit training and exercises and maneuvers in the field; and “instrumentalities of war.”

Retirees must apply for CRSC to their parent service, and the parent service is responsible for verifying that the disability is combat-related. This process is not automatic; it is application-driven. CRSC payments will generally be equal to the amount of VA disability compensation that has been determined to be combat-related. The legislation does not end the requirement that the retiree’s military retired pay be reduced by the amount of the total VA disability compensation the retiree receives. Instead, CRSC beneficiaries are to receive the financial equivalent of concurrent receipt as “special compensation,” but the statute states explicitly that it is not retired pay per se. CRSC payments are paid from the Department of Defense Military Retirement Fund. As of September 2017, a total of 90,740 retirees were receiving CRSC (see Figure 1).

---

20 The FY2003 NDAA required that the disability be rated at least 60%. This requirement was repealed by the FY2004 NDAA.

21 Instrumentalities of war include vehicles, vessels, or devices designed primarily for military service, for example combat vehicles, Navy ships, and military aircraft. Injuries associated with instrumentalities of war may also be those associated with, for example, munitions explosions or inhalation of gases or vapors in combat training.

CRSC for Military Disability (Chapter 61) and TERA Retirees

Servicemembers with a permanent DOD disability rating of 30% or greater may be retired and receive retired pay prior to completing 20 years of service. These retirees are generally referred to as “Chapter 61” retirees, a reference to Chapter 61, Title 10, which governs disability retirement. In addition to the Chapter 61 retirees with less than 20 years of service, those who voluntarily retired under the Temporary Early Retirement Authority (TERA) during the military drawdown of the early to mid-1990s also have less than 20 years of service. The original CRSC legislation excluded those active duty members who retired with less than 20 years of service.

However, the FY2008 NDAA expanded CRSC to include Chapter 61 and active duty TERA retirees effective January 1, 2008. Eligibility no longer requires a minimum number of years of service or a minimum disability rating (other than the 30% noted above for disability retirement); a 10% VA rating may qualify if it is combat-related. Eligible retirees must still apply to their parent service to validate that the disability is combat-related.

The FY2008 NDAA included almost all reserve disability retirees in the eligible CRSC population except those retired under 10 U.S.C. 12731b, a special provision which allows reservists with a physical disability not incurred in the line of duty to retire with between 15 and 19 creditable years of service.

The “Special Rule” for Disability Retirees

As noted earlier, an individual generally cannot receive two separate lifelong government annuities from federal agencies for the same purpose or qualifying event, for example, disability

---

retired pay and VA disability compensation. To preclude this, there is “special rule” for Chapter 61 disability retirees. Application of the special rule caps the CRSC at the level to which the retiree could have qualified based solely on years of service or longevity. In some instances, the special rule could limit or completely eliminate the concurrent receipt payment. In other instances, application of the rule may not result in any changes. Each situation is unique (rank, years of service, DOD and VA disability ratings, and the disability percentage attributable to combat) and requires independent calculations.

It appears that those most vulnerable to the reduction of CRSC due to the special rule would be active duty servicemembers with a disability retirement, significantly less than 20 years of service, and a high VA disability rating. Others potentially impacted would be reserve members with little active duty.

CRSC for Reserve Retirees

When CRSC was originally enacted in 2002, it required all applicants to have at least 20 years of service creditable for computation of retired pay. As a result, reserve retirees had to have at least 7,200 reserve retirement points to be eligible for CRSC. As noted earlier, a reservist receives a certain number of retirement points for varying levels of participation in the reserves, or active duty military service. The 7,200-point figure was extraordinarily high; it could only have been attained by a reservist who had many years of active duty military service in addition to a long reserve career. Initially this law, as enacted, effectively denied CRSC to almost all reservists. However, a provision in the FY2004 NDAA clarified the service requirement for reserve component personnel. It specified that personnel who qualify for reserve retirement by having at least 20 years of duty creditable for reserve retirement are eligible for CRSC. While eligible for CRSC, reserve retirees must be drawing retired pay (generally at age 60) to actually receive the CRSC payment.

CRSC Eligibility Summary

Essentially, with the exception of reserve component members injured while not in a duty status, all military retirees who have been awarded a Purple Heart or have combat-related disabilities compensable by the VA are eligible for CRSC (see Figure 2). Military retirees with service-connected disabilities which are not combat-related as defined by the statute are not eligible for CRSC, but may be eligible for CRDP as discussed below.
Concurrent Retirement and Disability Payments (CRDP)

The FY2004 NDAA authorized, for the first time, actual concurrent receipt for retirees with at least a 50% disability, regardless of the cause of disability. However, the amount of concurrent receipt was to be phased in over a 10-year period, from 2004 to 2013, except for 100% disabled retirees, who became entitled to immediate concurrent receipt effective January 1, 2005. Depending on the degree of disability, the initial amount of retired pay that the retiree could have restored would vary from $100 to $750 per month, or the actual amount of the offset, whichever was less. In 2014, all offsets ended and military retirees with at least a 50% disability became eligible.

---

eligible to receive their entire military retired pay and VA disability compensation. In FY2017 there were 577,399 retirees receiving CRDP.

**Figure 3. Current CRDP Recipients by Disability Rating**

</tbody>
</table>

*Notes:* Disability retirees generally must have over 20 years of service to qualify for CRDP. Data does not include 222 individuals with an unknown VA disability rating.

An **retiree cannot receive both CRSC and CRDP benefits.** The retiree may choose whichever is more financially advantageous to him or her and may change the type of benefit to be received during an annual *open season* to maximize the payments received. There are currently two groups of retirees who are *not* eligible for CRDP benefits (see **Figure 4**). The first group is non-disability military retirees with service-connected disabilities that have been rated by the VA at 40% or less. The second group includes Chapter 61 disability retirees with service-connected disabilities of 100% or less and with less than 20 years of service.
CRDP for Temporary Early Retirement Authority (TERA) Retirees

The National Defense Authorization Act for Fiscal Year 1993 granted temporary authority (which expired on September 30, 2001) for the services to offer early retirements to personnel with more than 15 but less than 20 years of service. TERA was used as a manpower tool to entice voluntary retirements during the post-Cold War drawdown. TERA retired pay was calculated in the usual way except that there is an additional reduction of 1% for every year of service below 20. Part or all of this latter reduction could be restored if the retiree worked in specified public service jobs (such as law enforcement, firefighting, and education) during the period immediately following retirement, until the point at which the retiree would have reached the 20-year mark if he or she had remained in the service.

TERA retirees are eligible for CRSC and CRDP even though they have less than 20 years of service. The “special rule” for disability retirees (discussed below) does not apply to TERA retirees since TERA was not a disability retirement, but rather a regular retirement but for those with less than 20 years of service.

Source: CRS, Title 10 of the United States Code.
Notes: "Member" refers to a retired member of the Armed Forces. Temporary Early Retirement Authority (TERA) retirees are those retired with less than 20 years of service due to force management requirements. Disability ratings are awarded in 10% increments.

---

Concurrent Receipt and Blended Retirement System
Lump Sum Payments

The Blended Retirement System (BRS), effective for all servicemembers joining on or after January 1, 2018 offers servicemembers the option to select a lump sum payment of a portion of their military retired pay in lieu of a monthly annuity.\(^26\) If a member retiring under the BRS is eligible for CRDP and elects the lump sum payment of retired pay, the individual will continue to receive a monthly VA disability payment. If the member electing the lump sum payment is not eligible for CRDP (i.e., the retired pay offset applies), the VA will withhold disability payments until the sum of the amount withheld over time equals the gross amount of the lump sum payment.\(^27\) If the member is eligible for CRSC, the procedures for withholding VA disability payments relate to the combat-related portion of the total VA entitlement.\(^28\)

CRSC and CRDP Comparisons and Costs

CRSC and CRDP share some common elements, but are unique benefits. Table 1 summarizes some of the similarities and differences between CRSC and CRDP.

\(^{26}\) For more information on the BRS, see CRS Report RL34751, *Military Retirement: Background and Recent Developments*, by Kristy N. Kamarck.

CRDP and CRSC are paid from the DOD Military Retirement Fund. Costs have been rising every year as a consequence of the phased implementation and a rise in the number of eligible recipients. As of September 2017, one-third of all military retirees collecting retired pay were receiving either CRDP or CRSC.

Notes: Some retirees may be eligible for both CRSC and CRDP but can only receive one or the other. Annual payments are made from the DOD Military Retirement Fund.

Issues and Options for Congress

Veteran advocacy groups continue to lobby for changes to the concurrent receipt programs that would expand benefits to a larger population of retirees. Other groups have pressed Congress to offset or streamline duplicative benefits, contending that the dual receipt of VA and DOD payments amounts to double-dipping, or in some cases triple-dipping for those veterans also

---

29 Although CRSC is paid from the Military Retirement Fund, it is not technically considered retired pay.
30 The number of veterans eligible for disability pay has been increasing in part due to policy changes that have increased outreach, improved claims processing and designated additional conditions for benefit eligibility. Increases in VA disability claims have also been attributed to the specific types of injuries suffered by veterans of the Iraq and Afghanistan conflicts.
eligible for Social Security Disability Insurance (SSDI) from the Social Security Administration.32

Some of the factors that Congress might consider regarding potential changes include program costs, program efficiencies, individual eligibility requirements, and interaction with other servicemembers’ and veterans’ benefits and programs. Below are some options to change concurrent receipt programs that have been proposed or considered.

Eliminate or Sunset Concurrent Receipt Programs

The Congressional Budget Office has estimated that eliminating the CRDP program would save the government $139 billion between 2018 and 2026.33 While achieving significant cost savings, eliminating or sun-setting concurrent receipt programs could be unpopular among servicemembers, veterans, and their families. Previous efforts to reduce benefits to servicemembers have typically included a grandfather clause that would allow all current servicemembers and retirees to maintain existing benefits while the law would only apply to those who joined the service after a specific date.

Extend CRDP to Chapter 61 Disability Retirees with Less Than 20 Years of Service

As previously discussed, the FY2008 NDAA extended CRSC eligibility to Chapter 61 retirees who retired due to combat-related physical disability prior to completing 20 years of service. However, Chapter 61 retirees with service-connected disabilities rated less than 50% or with less than 20 years of service are not eligible for CRDP. Congress could expand the CRDP provision to include this cohort. This option would extend CRDP eligibility to approximately 100,000 additional disability retirees at an estimated 10-year cost of $5.8 billion.34

Extend CRDP to Those with a 40% or Less VA Disability Rating

At present, those military retirees with service-connected disabilities rated at 50% or greater are eligible for CRDP. Congress could revise the concurrent receipt legislation to include the entire population of military retirees with service-connected disabilities. In 2014, CBO estimated that to extend benefits to all veterans who would be eligible for both disability benefits and military retired pay would cost $30 billion from 2015 to 2024.35

34 This cost estimate was provided by the Comptroller, Office of the Secretary of Defense.

Modify or Eliminate the Special Rule

With the extension of CRSC to Chapter 61 disability retirees, the special rule factors significantly into the concurrent receipt calculations. For those whose CRSC payment is limited or eliminated by the special rule, there may be a perceived inequity between CRSC recipients with 20 or more years of service (longevity retirees) and Chapter 61 (disability retirees who generally have less than 20 years of service) retirees.

To resolve this potential issue, Congress could modify or eliminate the special rule or limit its application to specific military operations. However, some observers may note that eliminating or modifying the special rule would result in paying for the same disability twice, by DOD and by VA. It might also complicate future initiatives to simplify and streamline post-service compensation whereby DOD would only compensate for years or service and the VA would only compensate for disability, as recommended by the Dole/Shalala commission.36
