Mexico: Organized Crime and Drug Trafficking Organizations

Updated July 28, 2020
Mexico: Organized Crime and Drug Trafficking Organizations

Mexican drug trafficking organizations (DTOs) pose the greatest crime threat to the United States and have “the greatest drug trafficking influence,” according to the U.S. Drug Enforcement Administration’s (DEA’s) annual National Drug Threat Assessment. These organizations, often referred to as transnational criminal organizations (TCOs), continue to diversify into crimes of extortion, human smuggling, and oil theft, among others. Their supply chains traverse the Western Hemisphere and the globe. Their extensive violence since 2006 has caused Mexico’s homicide rate to spike. They produce and traffic illicit drugs into the United States, including heroin, methamphetamine, marijuana, and synthetic opioids such as fentanyl, and they traffic South American cocaine.

Mexican DTO activities significantly affect the security of both the United States and Mexico. As Mexico’s DTOs expanded their control of the opioids market, U.S. overdoses rose sharply, according to the Centers for Disease Control, setting a record in 2019 with more than 70% of overdose deaths involving opioids, including fentanyl. Many analysts believe that Mexican DTOs’ role in the trafficking and producing of opioids is expanding.

Evolution of Mexico’s Criminal Environment

Mexico’s DTOs have been in constant flux, and yet they continue to wield extensive political and criminal power. In 2006, four DTOs were dominant: the Tijuana/Arellano Félix Organization (AFO), the Sinaloa Cartel, the Juárez/Vicente Carillo Fuentes Organization (CFO), and the Gulf Cartel. Government operations to eliminate the cartel leadership increased instability among the groups and sparked greater violence. Over the next dozen years, Mexico’s large and comparatively more stable DTOs fragmented, creating at first seven major groups and then nine, which are briefly described in this report. The DEA has identified those nine organizations as Sinaloa, Los Zetas, Tijuana/AFO, Juárez/CFO, Beltrán Leyva, Gulf, La Familia Michoacana, the Knights Templar, and Cartel Jalisco Nuevo Generación (CJNG).

In mid-2019, the leader of the long-dominant Sinaloa Cartel, Joaquín “El Chapo” Guzmán, was sentenced to life in a U.S. prison, further fracturing the once-hegemonic DTO. In December 2019, Genaro García Luna, a former head of public security in the Felipe Calderón Administration (2006-2012), was arrested in the United States on charges he had taken enormous bribes from Sinaloa, further eroding public confidence in Mexican government efforts.

Since his inauguration in late 2018, Mexican President Andrés Manuel López Obrador has implemented what some analysts contend is an ad hoc approach to security that has achieved little sustained progress. Despite reform promises, the president has relied on a conventional policy of using the military and a military-led national guard to help suppress violence. The president has targeted oil theft, which siphons away billions in government revenue annually.

Recent Developments

In 2019, Mexico’s national public security system reported more than 34,500 homicides, setting another record in absolute homicides and the highest national homicide rate since Mexico has published these data. In late 2019, several cartel fragments committed flagrant acts of violence, killing U.S.-Mexican citizens in some instances. Some Members of Congress questioned a U.S. policy of returning Central American migrants and others to await U.S. asylum proceedings in border cities, such as Tijuana, because these cities have reported among the highest urban homicide rates in the world. The Trump Administration also raised concerns over whether Mexican crime groups should be listed as terror organizations.

In June 2020, two high-level attacks on Mexican criminal justice authorities stunned Mexico, including an early morning assassination attempt targeting the capital’s police chief, allegedly by the CJNG. He survived the attack, but three others were killed in one of Mexico City’s most affluent neighborhoods. The other was the murder of a Mexican federal judge in Colima who had ruled in significant organized crime cases, including extradition of the CJNG’s top leader’s son to the United States.

Introduction

Mexico shares a nearly 2,000-mile border with the United States, and the two countries have historically close trade, cultural, and demographic ties. Mexico’s stability is of critical importance to the United States, and the nature and intensity of violence in Mexico has been of particular concern to the U.S. Congress. Over the past decade, Congress has held numerous hearings addressing violence in Mexico, U.S. counternarcotics assistance, and border security issues.

According to one Mexican think tank that publishes an annual assessment, the top five cities in the world for violence in 2019 were in Mexico. Increasing violence, intimidation of Mexican politicians in advance of elections, and assassinations of journalists and media personnel have continued to raise alarm. From 2017 through 2019, a journalist was murdered nearly once a month on average, leading to Mexico’s status as one of the world’s most dangerous countries to practice journalism. In the run-up to the 2018 local and national elections, some 37 mayors, former mayors, or mayoral candidates were killed, and murders of nonelected public officials rose above 500.

Over many years, Mexico’s brutal drug-trafficking-related violence has been dramatically punctuated by beheadings, public hangings of corpses, and murders of dozens of journalists and officials. Violence has spread from the border with the United States into Mexico’s interior. Organized crime groups have splintered and diversified their crime activities, turning to extortion, kidnapping, oil theft, human smuggling, sex trafficking, retail drug sales, and other illicit enterprises. These crimes often are described as more “parasitic” for local communities and populations inside Mexico, degrading a sense of citizen security. The violence has flared in the Pacific states of Michoacán and Guerrero, in the central states of Guanajuato and Colima, and in the border states of Tamaulipas, Chihuahua, and Baja California, where Mexico’s largest border cities are located (for map of Mexico, see Figure 1).

Drug traffickers exercised significant territorial influence in parts of the country near drug production hubs and along drug trafficking routes during the six-year administration of President Enrique Peña Nieto (2012-2018), much as they had under the previous president. Although homicide rates declined early in Peña Nieto’s term, total homicides rose by 22% in 2016 and 23% in 2017, reaching a record level. In 2018, homicides in Mexico rose above 33,000 for a national rate of 27 per 100,000 people. According to the U.S. Department of State, Mexico exceeded 34,500 intentional homicides in 2019, for a national rate of 29 per 100,000. Thus, for each of the most recent three years, records were set and then eclipsed.

1 El Consejo Ciudadano para la Seguridad Pública y la Justicia Penal (Citizen Council for Public Security and Criminal Justice), “Boletín Ranking 2019 de las 50 Ciudades más Violentas del Mundo,” June 1, 2020, at http://www.seguridadjusticiaypaz.org.mx/sala-de-prensa/1590-boletin-ranking-2019-de-las-50-ciudades-mas-violentas-del-mundo. The survey found in 2019 the world’s top most violent cities (all in Mexico) were (1) Tijuana, (2) Ciudad Juárez, (3) Uruapan, (4) Irapuato, and (5) Ciudad Obregón.

2 For background on Mexico, see CRS Report R42917, Mexico: Background and U.S. Relations, by Clare Ribando Seelke. See also Juan Albarracín and Nicholas Barnes, “Criminal Violence in Latin America,” Latin American Research Review, vol. 55, no. 2 (June 23, 2020), pp. 397-406.

3 For more background, see Laura Y. Calderón et al., Organized Crime and Violence in Mexico, University of San Diego, April 2019. See also CRS Report R45199, Violence Against Journalists in Mexico: In Brief, by Clare Ribando Seelke.

Violence is an intrinsic feature of the trade in illicit drugs. Traffickers use it to settle disputes, and a credible threat of violence maintains employee discipline and provides a semblance of order with suppliers, creditors, and buyers while serving to intimidate potential competitors. This type of drug-trafficking-related violence has occurred routinely and intermittently in U.S. cities since the early 1980s. The violence now associated with drug trafficking organizations (DTOs) in Mexico is of an entirely different scale. In Mexico, the violence is not only associated with resolving disputes, maintaining discipline, and intimidating rivals but also has been directed toward the government, political candidates, and the media. Some observers note that some of Mexico’s violence might be considered exceptional by the typical standards of organized crime. Periodically, when organized-crime-related homicides in Mexico break out in important urban centers or result in the murder of U.S. citizens, Members of Congress have considered the possibility of designating the criminal groups as foreign terrorists, as in late 2019. However, the DTOs appear to lack a discernible political goal or ideology, which is one element of a widely

---

7 CRS Insight IN11205, _Designating Mexican Drug Cartels as Foreign Terrorists: Policy Implications_, coordinated by Liana W. Rosen.
recognized definition of terrorism. In June 2020, the State Department’s annual Country Reports on Terrorism affirmed that in 2019, there was not credible evidence that international terrorist groups had bases in Mexico or that Mexican criminals had facilitated terrorist group members crossing the U.S.-Mexican border.8

Mexico’s high homicide rate is not exceptional in the region, where many countries are plagued by high rates of violent crime, such as the “Northern Triangle” countries of Central America—El Salvador, Guatemala, and Honduras. Overall, the Latin American region has a significantly higher homicide level than other regions worldwide, although there is wide variation within the region. According to the United Nations’ Global Study on Homicide, published July 2019, Latin America, with 13% of the world’s population in 2017, had 37% of the world’s intentional homicides.9 Mexico’s homicide rate was once about average for the region, but the country’s intentional homicides and homicide rates have risen steadily in the past few years. (This increase contrasts with homicide-rate declines in the Northern Triangle countries, where high rates decreased somewhat between 2017 and 2018.)

Accurately portraying Mexico’s criminal landscape can be challenging. Government enforcement actions and changing patronage patterns for bribery have unpredictable consequences for criminal groups, generating near-constant flux. This has been especially the case as new gangs emerge and old gangs splinter, shifting power balances. Stratfor, a geopolitical intelligence company, has broken rival crime networks in Mexico into three regional groupings: the Tamaulipas State, Sinaloa State, and Tierra Caliente regional groups.10 This regional framework also shows several states and regions of Mexico where the activities of these three regional groups mix or are contested. (See Figure 2 for a 2020 map by Stratfor.)

On December 1, 2018, President Andrés Manuel López Obrador, the populist leftist leader of the National Regeneration Movement (MORENA) party, took office for a six-year term after winning 53% of the vote in July 2018 elections. The new president pledged to make Mexico a more just and peaceful society and vowed to govern with austerity. He said he would not pursue a war against the DTOs and crime groups but would work to address the social conditions that allow criminal groups to thrive.

In his first year in office, President López Obrador backed constitutional reforms to allow military involvement in public security to continue for five more years, despite a 2018 Supreme Court ruling that prolonged military involvement in security violated the constitution. He secured congressional approval to stand up a new 80,000-strong National Guard (composed of former military, federal police, and new recruits) to combat crime. The approach to the National Guard and the continuation of an active domestic role for the military surprised many in the human rights community, who succeeded in persuading Mexico’s Congress to modify López Obrador’s original proposal to ensure the National Guard would be under civilian command. The National Guard’s first assignment for about 27,000 members of the new force was vigorous migration enforcement to comply with Trump Administration demands. As the National Guard continued to deploy in 2020, of the first 90,000 members of the National Guard (which has now exceeded

10 “Stratfor now divides Mexican organized criminal groups into the distinct geographic areas from which they emerged. This view is not just a convenient way of categorizing an increasingly long list of independent crime groups in Mexico, but rather it reflects the internal realities of most crime groups in Mexico.” See “Mexico’s Drug War Update: Tamaulipas-Based Groups Struggle,” Stratfor Worldview, April 16, 2015.
100,000 members), 80% tested did not meet basic policing training standards. López Obrador contends that Mexico’s National Guard was not prepared to handle the violence of the DTOs; as the National Guard was trained to carry out that task, López Obrador said the military can fill in through 2024.

**Congressional Concerns**

Over the past dozen years, Congress has held numerous oversight hearings addressing the violence in Mexico, U.S. counternarcotics assistance, and border security issues. Congressional concern increased in 2012 after U.S. consulate staff and security personnel working in Mexico came under attack. (Two U.S. officials traveling in an embassy vehicle were wounded in an attack allegedly abetted by corrupt Mexican police.) Occasional use of car bombs, grenades, and rocket-propelled grenade launchers—such as the one used to bring down a Mexican army helicopter in 2015—continues to raise concerns. Incidents such as the late-2019 massacre of dual U.S.-Mexican citizens near the U.S.-Mexican border have prompted Members of Congress to consider whether Mexican drug traffickers may be adopting insurgent or terrorist techniques.

Perceived harms to the United States from the DTOs—or transnational criminal organizations (TCOs), as the U.S. Department of Justice now identifies them—are due primarily to the organizations’ control of and efforts to move illicit drugs to the United States and to expand aggressively into heroin, synthetic opioids, and methamphetamine. Mexico experienced a sharp increase in opium poppy cultivation between 2014 and 2018, and Mexico is a growing producer of (and transit country for) synthetic opioids. This increase corresponds to an epidemic of opioid-related deaths in the United States and continued high demand for heroin and synthetic opioids.

---

**The Mérida Initiative**

The Mérida Initiative is a U.S.-Mexican antidrug and rule-of-law partnership for which Congress has provided $3.1 billion through FY2020. Many analysts have observed the need for more reporting on Mérida Initiative outcomes to help Congress oversee the funds it has appropriated. The State Department has pointed to some indicators of success, such as improvements in intelligence sharing and police cooperation that have helped to capture and extradite high-profile criminals. But the ongoing concerns about escalating violence in Mexico and drug overdose deaths in the United States have led many to question the efficacy of the Mérida Initiative.

---

13 In 2011, a U.S. Immigration and Customs Enforcement (ICE) agent was killed and another wounded in a drug gang shooting incident in San Luis Potosí, north of Mexico City. See “U.S. Immigration Agent Shot Dead in Mexico Attack,” *BBC News,* February 16, 2011.
15 Steven Dudley et al., “Mexico’s Role in the Deadly Rise of Fentanyl,” Wilson Center Mexico Institute and *InSight Crime,* February 2019. According to the Centers for Disease Control and Prevention, of the 72,000 Americans who died of drug overdoses in 2017, nearly 28,500 deaths involved fentanyl or an analog of the synthetic drug—45% more than in 2016.
Some Members of Congress are concerned about the persistently high levels of violence in Mexico, including attacks on journalists, attacks and killings of political candidates and their families that lead some Mexican candidates to withdraw from their races, attacks that leave judges fearing for their safety, and other aggressive measures taken against citizens and officials to ensure impunity. Overt political intimidation poses a significant threat to democracy in Mexico through the use of forced disappearances, violent kidnappings, and robberies to intimidate politicians and citizens. The major Mexican crime groups have continued to diversify their operations by engaging in such crimes as human smuggling, extortion, and oil theft while increasing their lucrative drug business.

The U.S. Congress has expressed concern over the violence and has sought to provide oversight on U.S.-Mexican security cooperation. Congress may continue to evaluate how the Mexican

---

government is combating the illicit drug trade, working to reduce related violence, and monitoring the effects of drug trafficking and violence on the security of both the United States and Mexico. Congress provided a new reporting requirement in the FY2020 National Defense Authorization Act (P.L. 116-92, §7211) that requires unclassified and classified reporting to Congress on foreign opioid traffickers, such as Mexico’s TCOs. There is consideration in the FY2021 NDAA of an amendment to highlight countries that are significant sources of fentanyl and fentanyl analogs for further reporting and potential sanctions.

**Escalation of DTO-Related Homicide, Corruption, and Impunity**

The number of homicides and the homicide rate grew substantially beginning in 2007, during the administration of President Felipe Calderón, and stayed at elevated levels through ensuing Mexican administrations. The sharp rise in absolute numbers of deaths was unprecedented, even compared with other Latin American countries with similarly high rates of crime and homicides. Estimates of Mexico’s disappeared or missing—numbering more than 73,000 since 2007, as reported by the Mexican government in mid-2020—have generated domestic and international concern. Alarm has grown about new bouts of extreme violence and the continuing discovery of mass graves around the country.

Casualties are reported differently by the Mexican government and Mexican media outlets that track the violence, so debate exists on how many have been killed. This report conveys Mexican government data, but the data have not been reported consistently or completely. Although different tallies diverged, during President Calderón’s tenure (2006-2012), there was a sharp increase in total homicides, which leveled off at the end of 2012 when Calderón left office. In the Enrique Peña Nieto administration, after a couple years’ decline, a steep increase was recorded between 2016 and the end of 2018, surpassing previous totals. According to some sources, since 2006, when violence grew in response to a more direct government assault on the crime groups, through the end of 2018, Mexico experienced some 125,000-150,000 homicides related to organized crime. These homicides do not include the 73,000 considered to be missing or disappeared over the past 14 years, as reported by the current government under President López Obrador, or the continued rise through López Obrador’s first 600 days in office.

---

17 This finding appears in several annual reports from the University of San Diego’s Justice in Mexico program, including in Calderón et al., *Organized Crime*.

20 The Mexican news organizations *Reforma* and *Milenio* both keep a tally of “narco-executions.” For instance, in 2014, *Reforma* reported 6,400 such killings, the lowest it has reported since 2008, whereas *Milenio* reported 7,993 organized-crime-related murders. Kimberly Heinle, Octavio Rodríguez Ferreira, and David A. Shirk, *Drug Violence in Mexico: Data and Analysis Through 2015*, University of San Diego, April 2016.

21 The government data published has changed over time. Under the Calderón government, tallies of “organized-crime-related” homicides were published until September 2011. The Peña Nieto administration also issued such estimates but stopped in mid-2013, only publishing data on all intentional homicides. The Justice in Mexico project has identified an average (over many years) of homicides linked to organized crime by assessing several sources. Of total homicides reported by the Mexican government, between 25% and 50% of those killings were likely linked to organized crime.

22 Sheridan, “Mexico’s Plague of Disappearances Continues to Worsen.” The author notes, “In Mexico, the disappearances are blamed on a wider variety of culprits: organized crime gangs, police, the military or some
A spate of crime in late 2019 appears to have been committed by factions of once-cohesive criminal groups. In October, Mexican security forces seized a son of imprisoned Mexican drug kingpin Joaquín “El Chapo” Guzmán—until the Sinaloa Cartel responded with overwhelming force that brought chaos to Sinaloa State’s capital, Culiacán, and prompted authorities to quickly release him. Reportedly, there is a split within the once all-powerful Sinaloa DTO, involving one fraction led by El Chapo’s offspring and another led by a senior top leader (see “Sinaloa DTO” section, below). In early November 2019, nine U.S.-Mexican dual citizens of an extended Mormon family (including children) were slain in the border state of Sonora. These incidents drew the attention of President Trump, who pushed the Mexican government to invite greater assistance from the U.S. government to help Mexico win the drug war.\(^\text{23}\) In 2019, Mexico City—with one of the highest police-per-population ratios in the country and traditionally considered off-limits to overt cartel violence—registered its highest homicide level in 25 years, exceeding 1,500 murders. As Mexico faced the Coronavirus Disease 2019 (COVID-19) pandemic in the spring of 2020, organized crime groups stepped up their activities, although in other countries in the region there were temporary declines in crime. Fighting among crime groups and cartels appears to have risen in Mexico, keeping homicide levels elevated. Fragmentation of DTOs has resulted in increased competition over drug infrastructure (see textbox).\(^\text{24}\)

On June 16, 2020, a federal judge who had supervised a case involving Rubén “El Menchito” Oseguera, the son of the CJNG leader and allegedly also a top cartel figure, was killed. The judge, who had ruled in a case involving El Menchito’s 2020 extradition to the United States, also

---

**Crime and Coronavirus Response in Mexico**

Homicide levels have increased as Mexico faces the Coronavirus Disease 2019 (COVID-19) pandemic. In the first six months of 2020, Mexico’s homicide rate rose by an estimated nearly 2% over the record set in the same period of 2019. In 2020, armed battles between crime groups and Mexican security forces continued. In 12 of Mexico’s 32 states, journalists reported social media depictions of cartel operatives passing out pandemic survival supplies (some stamped with drug trafficking organization [DTO] logos) in direct competition with Mexican authorities. Along the country’s west coast, in certain municipalities (equivalent to U.S. counties), some of the larger DTOs have supplied other public goods and services. In the Pacific state of Guerrero, where dozens of criminal groups operate openly, police have been absent and vigilante groups that reportedly have close links to the cartels imposed and enforced curfews. Under pandemic quarantine (declared March 30, 2020, in Mexico), criminal groups have still fought for territory and drug trafficking routes. In some Mexican cities, opportunistic crimes such as mugging, kidnapping, or extortion declined during the COVID-19 lockdown, but powerful cartels, such as the Cártel Jalisco Nueva Generación (CJNG), have attacked competitors, keeping homicide levels elevated. The pandemic has become an opportunity for the DTOs to exert greater power within their areas of influence, according to some analysts.

---

had delivered judgments in top Sinaloa Cartel cases. He and his wife were murdered outside their home in the capital city of Colima. Colima, a small state neighboring Jalisco, has in recent years seen Mexico’s highest per capita rate of intentional homicides.25 Less than two weeks after the judge and his wife were killed, on the morning of June 26, 2020, armed men ambushed Mexico City’s police chief and secretary of public security, Omar García Harfuch, seriously wounding him and killing two bodyguards and a bystander. García Harfuch, from his hospital bed, accused the CJNG of launching the attack in a tweeted message.26

Many analysts contend these attacks mark the CJNG’s expansion across the country and willingness to go after Mexican government officials in a brazen fashion.27 (For more background, see “Cártel Jalisco Nuevo Generación” section, below.) The DTOs’ use of strategic violence and displays of firepower to send messages to top public officials is a growing concern. Judges reportedly are citing the Mexico City incident to decline organized crime cases out of concern for their personal safety.28

Since early 2019, a significant number of migrants have resided in temporary shelters or provisional encampments in Mexico’s northern border states of Baja California, Chihuahua, and Tamaulipas under the Migrant Protection Protocols.29 All these border states have homicide rates exceeding national averages. In 2019, as in 2018, the two Mexican cities with the highest incidence of violent crime were Ciudad Juárez, Chihuahua, with 1,281 murders, and Tijuana, Baja California, with 2,000 homicides (see Figure 3).30 Migrants and border city residents were frequent victims of predatory crime in addition to homicide, such as kidnapping, robbery, and extortion. The turf battle between the once-predominant Sinaloa Cartel and its aggressive competitor—the CJNG—spawned chaotic violence from the border city of Tijuana all the way to Mexico’s east coast.

Many U.S. policymakers have expressed deep concerns about the extent of territory in Mexico not under central government control, where criminal groups and their fragments attempt to achieve dominance and ensure impunity from government authorities.31 The CJNG, for instance, was involved in violent clashes with rivals to control border crossings and smuggling routes into the United States.

In March 2020, Mexico experienced its most violent month, with 3,000 murder victims reported. The central state of Guanajuato was Mexico’s most violent state in the first half of 2020, with brutal attacks on two drug rehabilitation centers in the same city that resulted in 10 and 28 homicides, respectively. A battle over the illicit petroleum market between two major rivals, the CJNG and the oil tappers of the Cártel Santa Rosa de Lima (CSRL), boosted crime-related fatalities in Guanajuato.32 Both the leader of CSRL, José Antonio Yépez, known as “El Morro,”

25 Zachary Goodwin, “Why One of Mexico’s Smallest States Is Also Its Most Violent, InSight Crime, June 24, 2020. The article notes that the remains of a Colima congresswoman, Anel Bueno, were found in an unmarked grave two weeks before the judge’s murder.

28 For remarks by Mexico’s attorney general, see Gastavo Castillo García, “Va el ‘Narco’ por el Control Político y Territorial: Gertz,” La Jornada, July 7, 2020.

29 The Trump Administration’s Migration Protection Protocols allow for persons seeking asylum in the United States to be returned to Mexico to await their U.S. hearings.

30 Data provided by the University of San Diego’s Justice in Mexico project to CRS, May 1, 2020.

31 For more on criminal fragmentation, see Esberg, “More Than Cartels.”

32 Jorgic and Sanchez, “As Mexico Focuses on Coronavirus, Drug Gang Violence Rises”; Falko Ernst, “Mexican
and CJNG leaders threaten government officials to deter enforcement actions against them.\textsuperscript{33} Inter-cartel battles over the lucrative synthetic opioid fentanyl market in several states in central Mexico also have expanded over the past couple of years.

**Figure 3. Major Ports of Entry at the U.S.-Mexican Border**

![Map of major ports of entry at the U.S.-Mexican border.](source)

*Source: Prepared by CRS.*

**Corruption and Government Institutions**

The criminal involvement of state governors with the DTOs and other criminals is one window into the extent of corruption in the layers of government and across parties in Mexico.\textsuperscript{34} Twenty former state governors, many from the long-dominant Institutional Revolutionary Party (PRI), were under investigation or in jail in 2018.\textsuperscript{35} Former governors of the states of Coahuila, Tamaulipas, and Quintana Roo have been charged with money laundering and conspiracy. Other noteworthy examples of allegedly corrupt former governors include those prosecuted in Mexico and the United States:

\textsuperscript{33} El Morro, for instance, threatened the state government of Guanajuato and federal officials in June 2020 when his cousin, wife, and mother were picked up in a sweep to limit the Cártel Santa Rosa de Lima’s oil theft.

• Tomás Yarrington of Tamaulipas (1999-2005) of the PRI was arrested in Italy in 2017 and extradited to the United States in 2018 for U.S. charges of drug trafficking, money laundering, and racketeering. Since 2012, he had been under investigation for his links to the Gulf Cartel and Los Zetas in Mexico.36

• César Duarte of Chihuahua (2010-2016) of the PRI was an international fugitive wanted on a Red Notice by Interpol until his July 2020 arrest in Florida (during a visit of President López Obrador to Washington, DC) for extradition back to Mexico.37

• Javier Duarte of Veracruz (2010-2016) of the PRI was arrested in Guatemala and extradited to Mexico in August 2017. During his term, the number of persons forcibly disappeared in Veracruz is estimated to have exceeded 5,000.38 Following his trial in Mexico, Duarte received a nine-year sentence in September 2018.39

Over the six years of PRI President Peña Nieto’s term (2012-2018), Mexico fell 32 places in Transparency International’s Corruption Perception Index.40 In the 2019 survey, Mexican respondents’ perceptions of corruption improved slightly due to the popularity of President López Obrador in his first year in office. However, citizen perceptions of the security situation in Mexico appear to have worsened in much of the country in the first months of 2020.

Another nongovernmental study on combating corruption in the region examined the capacity of 15 countries in Latin America and the Caribbean to uncover, prevent, and punish corruption. Mexico’s ranking was near the middle in the 2020 survey but had moved little from the year before due to meager progress on long-term institutional reforms and low independence and efficiency in the legal system.41

---

Links Among Crime Groups, Police, and Other High-Ranking Officials

In Mexico, arrests of police and other public officials accused of cooperating with the drug trafficking organizations (DTOs) rarely have been followed by convictions, although a few prominent cases of corruption have achieved results. Police corruption has been so ubiquitous that law enforcement officials sometimes carry out violent assignments from DTOs and other criminal groups. Purges of Mexico’s municipal, state, and federal police have not rid the police of this enduring problem.

When El Chapo Guzmán escaped a second time from a federal maximum-security prison in 2015, scores of Mexican prison personnel were arrested. Eventually, the prison warden was fired. Guzmán, who led Mexico’s notorious Sinaloa Cartel for decades, was extradited to the United States in early 2017. In February 2019, he was convicted in federal court in New York for multiple counts of operating a continuing criminal enterprise. Some of the New York trial’s most incendiary testimony alleged that senior Mexican government officials took bribes from Guzmán. One prosecution witness alleged that then-President Enrique Peña Nieto (2012-2018) received a $100 million bribe from Guzmán, an allegation Peña Nieto strongly disputed. Some observers maintain that allegation was far-fetched.

In December 2019, Genaro García Luna was arrested in Texas on a U.S. indictment accused of taking multimillion-dollar bribes from the Sinaloa Cartel while holding top law enforcement positions. García Luna headed Mexico’s Federal Investigation Agency from 2001 to 2005 (under former President Vicente Fox of the National Action Party, or PAN). Under President Felipe Calderón, also of PAN, García Luna became secretary of public security. García Luna left Mexico in 2012 and sought to become a naturalized U.S. citizen. President López Obrador cited García Luna’s U.S. arrest as evidence that the preceding Calderón government’s fierce enforcement strategy had not successfully repelled the DTOs and that the López Obrador administration’s alternative approach was more effective in reducing corruption.

In early 2020, U.S. Secretary of State Mike Pompeo designated former Nayarit Governor Roberto Sandoval Castañeda (2011-2017, PRI Party) and his immediate family for corruption in misappropriating state assets and accepting bribes from the CJNG and the Beltran Leyva Organization. This designation was made under the Global Magnitsky Human Rights Accountability Act, rendering the designees ineligible for U.S. visas.42

Criminal Landscape in Mexico

The splintering of the large DTOs into competing factions and gangs of different sizes began in 2007 and continues today. The emergence of these different crime groups, ranging from TCOs to small local mafias (with certain trafficking or other crime specialties), has made the crime situation diffuse and the crime groups’ behavior harder to suppress or eradicate.

The older, large DTOs tended to be hierarchical, often bound by familial ties and led by hard-to-capture cartel kingpins. They have been replaced by flatter, more nimble organizations that tend to be loosely networked. Far more common in the present crime group formation is the outsourcing of certain aspects of trafficking. The various smaller organizations have resisted norms that might limit violence. Moreover, rivalries among a greater number of organized crime “players” have led to more violence, although in some cases the smaller organizations are “less

able to threaten the state and less endowed with impunity.” However, the larger organizations (Sinaloa, for example) that have adopted a cellular structure are still able to protect their leadership, such as the 2015 escape orchestrated for Sinaloa leader El Chapo Guzmán through a mile-long tunnel from a maximum-security Mexican prison.

The scope of the violence generated by Mexican crime groups has been difficult to measure due to restricted reporting by the government and attempts by crime groups to mislead the public. Criminal actors sometimes publicize their crimes in garish displays intended to intimidate their rivals, the public, or security forces, or they publicize their criminal acts of violence on the internet. Conversely, the DTOs may seek to mask their crimes by indicating that other actors, such as a competitor cartel, are responsible. Some shootouts are not reported due to media self-censorship or because the bodies disappear. One opposite example is the reported death in 2010 of a leader of the Knights Templar, Nazario Moreno González, but no body was recovered at the time. Rumors of his survival persisted and were confirmed in 2014, when he was killed in a gun battle with Mexican security forces. (See “Knights Templar” section, below.)

Forced disappearances in Mexico also are a growing concern, and efforts to accurately count the missing or forcibly disappeared have been limited, a problem exacerbated by underreporting. Government estimates of the number of disappeared people in Mexico—especially of those who are missing due to force and possible homicide—have varied widely over time, although a focus of the current Mexican government’s security strategy is an effort to accurately assess this problem. The López Obrador government has established a National Search Commission and announced in June 2020 that more than 73,000 Mexicans are missing or disappeared.

In the Gulf Coast state of Veracruz, a vast mass grave was unearthed in 2017 that contained some 250 skulls and other remains, some of which were found to be years old. Journalist watchdog group Animal Político, which focuses on combating corruption with transparency, concluded in a 2018 investigative piece that many states lack equipment to adequately investigate violent crime. For example, the authors found that 20 of Mexico’s 32 states lack biological databases needed to identify unclaimed bodies. Additionally, 21 states lack access to the national munitions database used to trace bullets and weapons.

The State Department’s June 2020 U.S. travel advisory for Mexico, which cautioned generally against travel to Mexico due to COVID-19 pandemic concerns, warned that five Mexican states are not recommended for travel due to crime—Colima, Guerrero, Michoacán, Sinaloa, and

46 For more on the López Obrador administration’s security approach, see CRS Report R42917, Mexico: Background and U.S. Relations, by Clare Ribando Seelke.
47 For more background on the commission, see State Department, 2019 Country Reports on Human Rights Practices: Mexico.
Tamaulipas—and recommended reconsideration of travel for another 11 due to crime. The total of 16 states featured in the June advisory comprise half of Mexico’s states.\(^{50}\)

According to the Swiss-based Internal Displacement Monitoring Centre, about 380,000 people were forcibly displaced in Mexico between 2009 and 2018 as a result of violence and organized crime. Some Mexican government authorities have said the number may exceed 1 million, but in such a count the definition of the causes for displacement is broad and includes anyone who moved due to violence. Dislocated Mexicans often cite clashes between armed groups or with Mexican security forces, inter-gang violence, and fear of future violence as reasons for leaving their homes and communities.\(^{51}\)

**Illicit Drugs in Mexico and Components of Its Drug Supply Market**

Today, the major Mexican DTOs are poly-drug, handling more than one type of drug, although they may specialize in the production or trafficking of specific products. According to the U.S. State Department’s 2020 *International Narcotics Control Strategy Report* (INCSR), Mexico is a significant source and transit country for heroin, marijuana, and synthetic drugs (such as methamphetamine and fentanyl) destined for the United States. Mexico remains the main trafficking route for U.S.-bound cocaine from the major supply countries of Colombia and (to a lesser extent) Peru and Bolivia.\(^{52}\) The U.S. Drug Enforcement Administration (DEA) notes that traffickers and retail sellers of fentanyl and heroin combine the drugs in various ways, such as pressing the combined powder drugs into highly addictive and extremely powerful counterfeit pills.

The west coast state of Sinaloa, with its long coastline and difficult-to-access areas, is favorable for drug cultivation and remains the heartland of Mexico’s drug trade. Marijuana and opium poppy cultivation have flourished in the state for decades.\(^{53}\) It also has been the home of Mexico’s most notorious and successful drug traffickers.

**Cocaine.** Cocaine of Colombian origin supplies most of the U.S. market, and most of that supply is trafficked through Mexico. Mexican drug traffickers are the primary wholesalers of U.S. cocaine. According to the White House Office of National Drug Control Policy (ONDCP), coca cultivation and cocaine production in Colombia increased to a record 951 metric tons of pure cocaine in 2019, an 8% rise over 2018.\(^{54}\) Cutting cocaine with synthetic opioids (often unbeknownst to users) has become more commonplace and increases the danger of overdose.

**Heroin and Synthetically Produced Opioids.** In its 2019 *National Drug Threat Assessment* (NDTA), the DEA warned that Mexico’s crime organizations, aided by corruption and impunity, present an acute threat to U.S. communities given their dominance in heroin and fentanyl exports. Mexico’s heroin traffickers, which traditionally provided black or brown heroin to the western part of the United States, in 2012 and 2013 began to change their opium processing methods to

---

\(^{53}\) The region where Sinaloa comes together with the states of Chihuahua and Durango is a drug-growing area sometimes called Mexico’s “Golden Triangle,” after the productive area of Southeast Asia by the same name. In this region, one-third of the population is estimated to make a living from the illicit drug trade.

produce white heroin, a purer and more potent product. The DEA maintains that no other crime groups, foreign or domestic, have a comparable reach to distribute within the United States.\(^{55}\)

According to the ONDCP, 41,800 hectares of opium poppy were cultivated in Mexico in 2018—down 5% compared with 2017 but up 280% since 2013. Mexico’s potential production of pure heroin rose to 106 metric tons (MT) in 2018 from 26 MT in 2013.\(^{56}\) The DEA reports that 90% of U.S.-seized heroin comes from Mexico; this heroin is increasingly laced with fentanyl.

The extent of Mexico’s role in the production of fentanyl, which is 30-50 times more potent than heroin, is less well understood than Mexico’s role in fentanyl trafficking, which is increasingly well documented.\(^{57}\) What is known is that seizures of fentanyl, fentanyl analogs, and methamphetamine—the leading synthetic lab-produced drugs entering the U.S. illicit drug market—have been rising along the Southwest border. (For U.S. Customs and Border Protection seizure data, see Figure 4.)

Illicit imports of fentanyl from Mexico involve Chinese-produced fentanyl or fentanyl precursors coming most often from China. Many analysts contend that plant-sourced drugs, such as heroin and morphine, may be gradually replaced in the criminal market by synthetic drugs. In the first half of 2019, according to the State Department, Mexico seized 157.3 kilograms of fentanyl, a 94% increase over the same time period in 2018.\(^{58}\) Some observers suggest that if synthetic drugs continue to expand their market share, the drug cartel structure that has relied upon control of opium production, heroin manufacture, and distribution using the system of drug trafficking routes, or plazas, in Mexico for trafficking drugs for sale inside the United States could be disrupted. Synthetic drug trafficking with distribution arranged over the internet via the Dark Web would replace it. Abandoning heroin for the cheaper-to-produce fentanyl might cause Mexican opium farmers to be thrown out of work.\(^{59}\)

\(^{56}\) For background on Mexico’s heroin and fentanyl exports, see CRS In Focus IF10400, Trends in Mexican Opioid Trafficking and Implications for U.S.-Mexico Security Cooperation, by Liana W. Rosen and Clare Ribando Seelke.

However, the economic devastation of the COVID-19 pandemic, projected by the International Monetary Fund to reduce economic growth in Mexico by more than 10% in 2020 (estimated as of June 2020), may temporarily push former opium growers back into cultivation. The medium- and longer-term impacts of the pandemic and coming recession on drug markets and consumer demand remain unknown.\(^{60}\)

**Methamphetamine.** Mexican-produced methamphetamine has overtaken U.S. sources of the drug and expanded into nontraditional methamphetamine markets inside the United States, allowing Mexican traffickers to control the wholesale market inside the United States, according to the DEA. The expansion of methamphetamine seizures inside Mexico, as reported by the annual INCSR, is significant. As of August 2018, as reported in the 2019 INCSR, Mexican authorities had seized 130 MT of methamphetamine, due in part to a large seizure of some 50 MT in Sinaloa.\(^{61}\) U.S. methamphetamine seizures significantly increased between 2014 and 2019, as shown in Figure 4. The purity and potency of methamphetamine has driven up overdose deaths in the United States.

**Cannabis.** In the first six months of 2019, Mexico seized 91 MT of marijuana and eradicated more than 2,250 hectares of marijuana, according to the State Department’s 2020 INCSR.

---

Authorities are projecting a continued decline in U.S. demand for Mexican marijuana because drugs “other than marijuana” will likely predominate. This is also the case due to legalized cannabis or medical cannabis in several U.S. states and Canada, reducing its value as part of Mexican trafficking organizations’ portfolio. Mexico is also considering cannabis legalization and regulation.

Evolution of the Major Drug Trafficking Groups

The DTOs have been in constant flux in recent years. By some accounts, when President Calderón came to office in 2006, there were four dominant DTOs: the Tijuana/Arellano Félix organization (AFO), the Sinaloa Cartel, the Juárez/Vicente Carillo Fuentes Organization (CFO), and the Gulf Cartel. Since then, the large, formerly stable organizations that existed in the earlier years of the Calderón administration have fractured into many more groups.

For several years, the DEA identified the following seven organizations as dominant: Sinaloa, Los Zetas, Tijuana/AFO, Juárez/CFO, Beltrán Leyva, Gulf, and La Familia Michoacana. In some sense, these seven might be viewed as the “traditional” DTOs. However, many analysts suggest those seven groups have fragmented. In the past decade, as fragmentation has produced many more criminal actors, it has been accompanied by many groups’ diversification into other types of criminal activity, as noted earlier. The following section focuses on the nine DTOs that are currently most prominent (about which the most information is readily available) and whose current status illuminates the fluidity of all the crime groups in Mexico as they face new challenges from competition and changing market dynamics. Some analysts maintain there may be as many as 20 major organizations and more than 200 criminal groups overall in Mexico.

Nine Major DTOs

Reconfiguration of the major DTOs—often referred to as TCOs due to their diversification—preceded the intensive fragmentation that exists today. The Gulf Cartel, based in northeastern Mexico, had a long history of dominant power and profits, with the height of its power in the early 2000s. However, the Gulf Cartel’s enforcers—Los Zetas, who were organized from highly trained Mexican military deserters—split to form a separate DTO and turned against their former employers, engaging in a hyper-violent competition for territory.

The well-established Sinaloa DTO, with roots in western Mexico, has fought brutally for increased control of routes through the border states of Chihuahua and Baja California, with the goal of remaining the country’s dominant DTO. Sinaloa has a decentralized structure of loosely linked smaller organizations, which has been susceptible to conflict when units break away. Nevertheless, the decentralized structure has enabled it to be quite adaptable in the highly competitive and unstable environment that now prevails.

Sinaloa survived the arrest of its billionaire founder El Chapo Guzmán in 2014. The federal operation to capture and detain Guzmán, which gained support from U.S. intelligence, was viewed as a major victory for the Peña Nieto government. Initially the kingpin’s arrest did not

62 See Patrick Corcoran, “How Mexico’s Underworld Became Violent,” InSight Crime, April 2, 2013. According to this article, constant organizational flux, which continues today, characterizes violence in Mexico.

64 Oscar Becerra, “Traffic Report: Battling Mexico’s Sinaloa Cartel,” Jane’s Information Group, May 7, 2010. The author describes the networked structure: “The Sinaloa Cartel is not a strictly vertical and hierarchical structure, but instead is a complex organization containing a number of semiautonomous groups.”
spawn a visible power struggle within the DTO. His dramatic escape in July 2015 and his rearrest in January 2016, however, raised speculation that his role in the Sinaloa Cartel might have become more as a figurehead rather than a functional leader.

The Mexican government’s decision to extradite Guzmán to the United States, carried out on January 19, 2017, appears to have led to violent competition from a competing cartel, the CJNG, which split from Sinaloa in 2010. Over 2016 and the early months of 2017, the CJNG’s quick rise and a possible power struggle inside of Sinaloa between El Chapo’s sons and a successor to their father, a longtime associate known as “El Licenciado,” reportedly caused increasing violence.65

In the Pacific Southwest, La Familia Michoacana—a DTO once based in the state of Michoacán and influential in surrounding states—split apart in 2015. It eventually declined in importance as its successor, the Knights Templar, grew in prominence in the region known as the Tierra Caliente of Michoacán, Guerrero, and in parts of neighboring states Colima and Jalisco. At the same time, the CJNG rose to prominence between 2013 and 2015, and many analysts currently deem it Mexico’s largest and most dangerous DTO. The CJNG has thrived with the decline of the Knights Templar, which was targeted by the Mexican government.66 The CJNG has assassinated numerous public officials in an effort to intimidate the Mexican government.

Open-source research about the traditional DTOs and their successors mentioned above is more available than information about smaller factions. With as many as 200-400 criminal groups, it is hard to assess longevity or do a census of which groups are major actors. Current information about the array of new regional and local crime groups is more difficult to assess than information about these traditional DTOs. The once-coherent organizations and their successors are still operating, both in conflict with one another and, at times, cooperatively.

### Tijuana/Arellano Félix Organization

The AFO is a regional “tollgate” organization that historically has controlled the drug smuggling route between Baja California (Mexico) and southern California.67 It is based in the border city of Tijuana. One of the founders of modern Mexican DTOs, Miguel Ángel Félix Gallardo, a former police officer from Sinaloa, created a network that included the Arellano Félix family and numerous other DTO leaders (such as Rafael Caro Quintero, Amado Carrillo Fuentes, and El Chapo Guzman). The seven “Arellano Félix” brothers and four sisters inherited the AFO from their uncle, Miguel Ángel Félix Gallardo, after his arrest in 1989 for the murder of DEA Special Agent Enrique “Kiki” Camarena.68

The AFO was once one of the two dominant DTOs in Mexico, infamous for brutally controlling the drug trade in Tijuana in the 1990s and early 2000s.69 The other was the Juárez DTO, also

---

68 Special Agent Camarena was an undercover DEA agent working in Mexico who was kidnapped, tortured, and killed in 1985. The Guadalajara-based Félix Gallardo network broke up in the wake of the investigation of its role in the murder.
69 Mark Stevenson, “Mexico Arrests Suspected Drug Trafficker Named in US Indictment,” Associated Press, October...
known as the Carrillo Fuentes Organization. The Mexican government and U.S. authorities took vigorous enforcement action against the AFO in the early years of the 2000s, with the arrests and killings of the five brothers involved in the drug trade—the last of whom was captured in 2008.

In 2008, Tijuana became one of the most violent cities in Mexico. That year, the AFO split into two competing factions when Eduardo Teodoro “El Teo” García Simental, an AFO lieutenant, broke from Fernando “El Ingeniero” Sánchez Arellano (the nephew of the Arellano Félix brothers who had taken over the management of the DTO). García Simental formed another faction of the AFO, reportedly allied with the Sinaloa DTO. Further contributing to the escalation in violence, other DTOs sought to gain control of the profitable Tijuana/Baja California–San Diego/California plaza in the wake of the power vacuum left by the earlier arrests of the AFO’s key leadership.

Some observers believe the 2010 arrest of García Simental created a vacuum for the Sinaloa DTO to gain control of the Tijuana/San Diego smuggling corridor. Despite its weakened state, the AFO appears to have maintained control of the plaza through an agreement made between Sánchez Arellano and the Sinaloa DTO’s leadership, with Sinaloa and other trafficking groups paying a fee to use the plaza.

In 2013, the DEA identified Sánchez Arellano as one of the six most influential traffickers in the region. Following his arrest in 2014, however, Sánchez Arellano’s mother, Enedina Arellano Félix, who was trained as an accountant, reportedly took over. It remains unclear if the AFO retains enough power through its own trafficking and other crimes to continue to operate as a tollgate cartel. Violence in Tijuana rose to more than 100 murders a month in late 2016, with the uptick in violence attributed to Sinaloa battling its new challenger, the CJNG. The CJNG has apparently taken an interest in both local drug trafficking inside Tijuana and cross-border trafficking into the United States. As in other parts of Mexico, the role of the newly powerful CJNG organization may determine the nature of the area’s DTO configuration in coming years.

Some analysts maintain that the resurgence of violence in Tijuana and the spiking homicide rate in the nearby state of Southern Baja California are linked to the CJNG forging an alliance with remnants of the AFO. Tijuana was the city with the highest number of homicides in the country in both 2018 and 2019.

24, 2013.

72 “Mexico Security Memo: Torreon Leader Arrested, Violence in Tijuana,” Stratfor Worldview, April 24, 2013, at http://www.stratfor.com/analysis/mexico-security-memo-torreon-leader-arrested-violence-tijuana#axzz37Bb5rDDg. In 2013, Nathan Jones at the Baker Institute for Public Policy asserted that the Sinaloa-AFO agreement allows those allied with the Sinaloa DTO, such as the CJNG, or otherwise not affiliated with Los Zetas to also use the plaza. For more information, see Nathan P. Jones, “Explaining the Slight Uptick in Violence in Tijuana,” Baker Institute, September 17, 2013, at http://bakerinstitute.org/files/3825/.

73 Castillo and Spagat, “Mexico Arrests Leader.”

Sinaloa DTO

Sinaloa, described as Mexico’s oldest and most established DTO, comprises a network of smaller organizations. In April 2009, President Barack Obama designated the notorious Sinaloa Cartel as a drug kingpin entity pursuant to the Foreign Narcotics Kingpin Designation Act. Frequently regarded as the most powerful drug trafficking syndicate in the Western Hemisphere, the Sinaloa Cartel was an expansive network at its apex: Sinaloa leaders successfully corrupted public officials from the local to the national level inside Mexico and abroad to operate in some 50 countries. Traditionally one of Mexico’s most prominent organizations, each of Sinaloa’s major leaders was designated a kingpin in the early 2000s. At the top of the hierarchy was El Chapo Guzmán, listed in 2001; Ismael Zambada García (“El Mayo”), listed in 2002; and Juan José “El Azul” Esparragoza Moreno, listed in 2003.

By some estimates, Sinaloa had grown to control 40%-60% of Mexico’s drug trade by 2012 and had annual earnings calculated to be as high as $3 billion. The DEA has long identified the Sinaloa Cartel as the primary trafficker of drugs to the United States. In 2008, a federation dominated by the Sinaloa Cartel (which included the Beltrán Leyva Organization and the Juárez DTO) broke apart, leading to a battle among the former partners that sparked the most violent period in recent Mexican history.

Since its 2009 kingpin designation of Sinaloa, the United States has attempted to dismantle Sinaloa’s operations by targeting individuals and financial entities allied with the cartel. For example, in August 2017, the U.S. Department of the Treasury sanctioned the Flores DTO and its leader, Raúl Flores Hernández, as kingspins, having previously sanctioned some 12 businesses and 16 members of his financial and drug trafficking enterprise as collaborators with Sinaloa.

The Sinaloa Cartel’s most visible longtime leader, El Chapo Guzmán, escaped twice from Mexican prisons—in 2001 and again in 2015. The July 2015 escape, after his rearrest the year prior, was a major embarrassment to the Peña Nieto administration, and that incident may have convinced the Mexican government to extradite the alleged kingpin rather than try him in Mexico after his recapture.

In January 2017, the Mexican government extradited Guzmán to the United States. He was indicted in New York District’s federal court in Brooklyn and tried from November 2018 to February 2019. His lawyers maintained he was not the head of the Sinaloa enterprise. Nevertheless, he was convicted by a federal jury in February 2019 and sentenced by a U.S. district judge in July 2019 to a life term in prison, with the addition of 30 years, and ordered to pay $12.6 billion in forfeiture for being the principal leader of the Sinaloa Cartel and for 26 drug-related charges, including a murder conspiracy.

---

76 P.L. 106-120. At the same time, President Barack Obama identified two other Mexican DTOs as kingspins: La Familia Michoacana and Los Zetas. The kingpin designation is one of two major programs by the U.S. Department of the Treasury imposing sanctions on drug traffickers. Congress enacted the program sanctioning individuals and entities globally in 1999.

77 From 2012 on, cartel leader El Chapo Guzmán was ranked in Forbes Magazine’s listing of self-made billionaires.

After Guzmán’s trusted deputy El Azul Esparragoza Moreno was reported to have died in 2014, the head of the Sinaloa DTO was assumed to be Guzmán’s partner, Ismael Zambada García, alias “El Mayo,” who is thought to continue in that leadership role. Sinaloa may operate with a more horizontal leadership structure than previously thought. Sinaloa operatives control certain territories, making up a decentralized network of bosses who conduct business and violence through alliances with each other and local gangs. Local gangs throughout the region specialize in specific operations and are then contracted by the Sinaloa DTO network. The shape of the cartel in the current criminal landscape is evolving, however, as Sinaloa’s rivals eye a formidable drug empire built on the proceeds from trafficking South American cocaine and locally sourced methamphetamine, marijuana, and heroin to the U.S. market.

The Sinaloa Cartel appears to have been under a certain amount of pressure thus far in 2020. Some analysts warn that Sinaloa remains powerful given its dominance internationally and its infiltration of the upper reaches of the Mexican government. Other analysts maintain that Sinaloa is in decline, citing its breakup into factions and violence from inter- and intra-organizational tensions. The CJNG evidently has battled against its former partner, Sinaloa, in a number of regions and has been deemed by several authorities to be Mexico’s new most expansive cartel. Friction between two factions of the Sinaloa organization intensified in May and June 2020, with violent infighting between a faction led by El Chapo’s children (known collectively as “Los Chapitos”) and those aligned with a faction under El Mayo.

**Juárez/Carrillo Fuentes Organization**

Based in the border city of Ciudad Juárez in the central northern state of Chihuahua, the once-powerful Juárez DTO controlled the smuggling corridor between Ciudad Juárez and El Paso, TX, in the 1980s and 1990s. By some accounts, the Juárez DTO controlled at least half of all Mexican narcotics trafficking under the leadership of its founder, Amado Carrillo Fuentes. Vicente Carrillo Fuentes, Amado’s brother, took over the leadership of the cartel when Amado died during plastic surgery in 1997 and reportedly led the Juárez organization until his arrest in October 2014.

In 2008, the Juárez DTO broke from the Sinaloa federation, with which it had been allied since 2002. The ensuing rivalry between the Juárez DTO and the Sinaloa DTO helped to turn Ciudad Juárez into one of the most violent cities in the world. From 2008 to 2011, the Sinaloa DTO and

---

83 Observers dispute the extent to which Guzmán made key strategic decisions for Sinaloa. Some maintain he was a figurehead whose arrest had little impact on Sinaloa’s functioning, as he ceded operational tasks to El Mayo and Esparragoza long before his arrest.

86 Bailey, “Drug Trafficking Organizations and Democratic Governance,” p. 121.

87 Some analysts trace the origins of the split to a personal feud between El Chapo Guzmán of the Sinaloa DTO and former ally Vicente Carrillo Fuentes. In 2004, Guzmán allegedly ordered the killing of Rodolfo Carrillo Fuentes, one of Vicente’s brothers. Guzmán’s son, Edgar, was killed in May 2008, allegedly on orders from Carrillo Fuentes. See Alfredo Corchado, “Juárez Drug Violence Not Likely to Go Away Soon, Authorities Say,” *Dallas Morning News*, May 17, 2010.
the Juárez DTO fought a “turf war,” and Ciudad Juárez experienced a wave of violence with spikes in homicides, extortion, kidnapping, and theft—at one point reportedly experiencing 10 murders a day.\footnote{Steven Dudley, “Police Use Brute Force to Break Crime’s Hold on Juárez,” \textit{InSight Crime}, February 13, 2013. Some Mexican newspapers such as \textit{El Diario} reported more than 300 homicides a month in 2010 when the violence peaked.} From 2008 to 2012, the violence in Juárez cost about 10,000 lives. Reportedly, more than 15% of the population displaced by drug-related violence inside Mexico between 2006 and 2010 came from the border city, even though it had only slightly more than 1% of Mexico’s population.\footnote{For an in-depth narrative of the conflict in Juárez and its aftermath, see Steven Dudley, “Juárez: After the War,” \textit{InSight Crime}, February 13, 2013. For a discussion of out-migration from the city due to drug-related violence, see Viridiana Ríos Contreras, “The Role of Drug-Related Violence and Extortion in Promoting Mexican Migration: Unexpected Consequences of a Drug War,” \textit{Latin America Research Review}, vol. 49, no. 3 (2014).}

Traditionally a major trafficker of both marijuana and cocaine, the Juárez Cartel became active in opium cultivation and heroin production, according to the DEA. Between 2012 and 2013, violence dropped considerably, which some analysts attributed to both the actions of the police and President Calderón’s socioeconomic program \textit{Todos Somos Juárez}, or \textit{We Are All Juárez}.\footnote{Calderón launched \textit{Todos Somos Juárez} and sent the Mexican military into Ciudad Juárez in an effort to drive out DTO proxies and operatives. “Calderón Defiende la Estrategia en Ciudad Juárez en Publicación de Harvard,” CNN \textit{Mexico}, February 17, 2013. See also CRS Report R41349, \textit{U.S.-Mexican Security Cooperation: The Mérida Initiative and Beyond}, by Clare Ribando Seelke and Kristin Finklea.} Some analysts posit Sinaloa’s success in its battle over the Juárez DTO after 2012 abetted by local authorities as the reason for the relatively peaceful and unchallenged control of the border city despite the Juárez DTO’s continued presence in the state.\footnote{See Steven Dudley, “How Juárez’s Police, Politicians Picked Winners of Drug War,” \textit{InSight Crime}, February 13, 2013.} The El Paso and Juárez transit route experienced regular violence with the rise in killings on the Mexican side of the border since 2016, however, largely thought to be a battle for control between Sinaloa and the CJNG and through their proxies.\footnote{Daniel Borunda, “Mexican Army Again to Patrol Juárez; Military to Increase Presence After Surge in Violence Across Chihuahua,” \textit{El Paso Times}, May 14, 2018.}

**Gulf DTO**

Based in the border city of Matamoros, Tamaulipas, with operations in other Mexican states on the Gulf side of Mexico, the Gulf DTO was a transnational smuggling operation with agents in Central and South America.\footnote{Bailey, “Drug Trafficking Organizations and Democratic Governance,” p. 120.} The Gulf DTO was the main competitor challenging Sinaloa for trafficking routes in the early 2000s, but it now battles its former enforcement wing, Los Zetas, over territory in northeastern Mexico. The Gulf DTO reportedly has split into several competing gangs. Some analysts no longer consider it a whole entity and maintain that it is so fragmented that factions of its original factions are fighting.\footnote{Scott Stewart, “Tracking Mexico’s Cartels in 2018,” \textit{Stratfor Worldview}, February 1, 2018.} The Gulf DTO arose in the bootlegging era of the 1920s. In the 1980s, its leader, Juan García Ábrego, developed ties to Colombia’s Cali Cartel and to the Mexican federal police. García Ábrego was captured in 1996 near Monterrey, Mexico.\footnote{Steven Dudley and Sandra Rodríguez, \textit{Civil Society, the Government and the Development of Citizen Security}, Wilson Center Mexico Institute, Working Paper, August 2013, p. 11.} His violent successor, Osiel Cárdenas Guillén, corrupted elite Mexican military forces to become his hired assassins. Those corrupted military personnel became known as Los Zetas when they fused with the Gulf Cartel. In the early
2000s, Gulf was considered one of the most powerful Mexican DTOs. Cárdenas was arrested by Mexican authorities in 2003, but he continued to run his drug enterprise from prison until his extradition to the United States in 2007.  

Tensions between the Gulf DTO and Los Zetas culminated in their split in 2010. Antonio “Tony Tormenta” Cárdenas Guillén, Osiel’s brother, was killed that year, and leadership of the Gulf went to another high-level Gulf lieutenant, Jorge Eduardo Costilla Sánchez, also known as “El Coss,” until his arrest in 2012. Exactly what instigated the split between Los Zetas and Gulf has not been determined, but the growing strength of the paramilitary group and its leader was a factor. Some analysts say Los Zetas blamed the Gulf DTO for the murder of a Zeta close to their leader, which sparked the rift. Others posit that the split happened earlier, but the Zetas organization that had brought both military discipline and sophisticated firepower to cartel combat was clearly acting independently by 2010.

Mexican federal forces identified and targeted a dozen Gulf and Zeta bosses they believed responsible for the wave of violence in Tamaulipas in 2014. Analysts have reported that the structures of both the Gulf DTO and Los Zetas have been decimated by federal action and combat between each other, and both groups now operate largely as fragmented cells that do not communicate with each other and often take on new names.

From 2014 through 2016, Tamaulipas state reported daily kidnappings, daytime shootings, and burned-down bars and restaurants in towns and cities in many parts of the state, such as the port city of Tampico. Fragmented cells of the Gulf DTO and of Los Zetas have expanded into other criminal operations, such as fuel theft, kidnapping, and widespread extortion. In the 2019 NDTA, the DEA maintained that the Gulf Cartel, which traditionally focused on the cocaine and marijuana trade, has expanded into heroin and methamphetamine and smuggles the majority of its drug shipments into South Texas.

**Los Zetas**

Los Zetas originally consisted of former elite airborne special force members of the Mexican army who defected to the Gulf DTO and became its hired assassins. Although Zeta members are part of a prominent transnational DTO, their main asset is not drug smuggling but organized violence. They evolved from the armed wing of the Gulf Cartel to an outfit in their own right that amassed significant power to carry out an extractive business model, thus generating revenue

---

97 Eduardo Guerrero Gutiérrez, “El Dominio del Miedo,” *Nexos*, July 1, 2014. Suspecting the Gulf DTO of the death of Sergio Mendoza, the founder of Los Zetas, Heriberto “El Lazco” Lazcano reportedly offered a 24-hour amnesty period for Gulf operatives to claim responsibility, which they never did. This event, some scholars maintain, was the origin of the split between the groups.
99 Interview with Eduardo Guerrero, June 2014. “Balkanization,” or decentralization of the structure of the organization, does not necessarily indicate that a criminal group is weak but simply indicates that the group lacks a strong central leadership. Also, news outlets inside Tamaulipas remain some of the most threatened by DTO cells, so they are reluctant to report on criminal violence and its consequences.
100 DEA, 2019 NDTA.
101 Most reports indicate that Los Zetas were created by a group of 30 lieutenants and sub-lieutenants who deserted from the Mexican military’s Special Mobile Force Group (Grupos Aeromóviles de Fuerzas Especiales, GAFES) to join the Gulf Cartel in the late 1990s.
from crimes such as fuel theft, extortion, human smuggling, piracy, arms smuggling, and kidnapping, which are widely seen to inflict more suffering on the Mexican public than does transnational drug trafficking.\footnote{Bailey, “Drug Trafficking Organizations and Democratic Governance,” p. 120; interview with Alejandro Hope, Wilson Center, July 2014.}

Los Zetas had a significant presence in several Mexican states on the Gulf side of the country and extended their reach to Ciudad Juárez (Chihuahua) and some Pacific states. They also operate in Central and South America. More aggressive than other groups, Los Zetas used intimidation as a strategy to maintain control of territory, making use of social media and public displays of bodies and body parts to send messages to frighten Mexican security forces, the local citizenry, and rival organizations. Sometimes smaller gangs and organizations use the “Zeta” name to tap into the benefits of the Zeta reputation, or “brand.”\footnote{George Grayson, The Evolution of Los Zetas in Mexico and Central America: Sadism as an Instrument of Cartel Warfare (Carlisle Barracks, PA: U.S. Army War College Press, 2014), p. 9.}

Unlike many other DTOs, Los Zetas have been less inclined to attempt to win local populations’ support in the territory in which they operate. They are linked to a number of massacres, such as the 2011 firebombing of a casino in Monterrey that killed 53 people and the 2011 torture and mass execution of 193 migrants who were traveling through northern Mexico by bus.\footnote{According to Grayson, Los Zetas also are believed to kill members of law enforcement officials’ families in revenge for action taken against the organization, reportedly even targeting families of fallen military men.} Los Zetas are known to kill those who cannot pay extortion fees or who refuse to work for them, often targeting migrants.\footnote{Will Grant, “Heriberto Lazcano: The Fall of a Mexican Drug Lord,” BBC News, October 13, 2012.}

In 2012, Mexican marines killed longtime Zeta leader Heriberto Lazcano (alias “El Lazca”), one of the founders of Los Zetas, in a shootout in the northern state of Coahuila.\footnote{“Los Zetas Are the Criminal Organization Hardest Hit by the Mexican Government,” Southernpulse.info, May 13, 2015.} The capture of his successor, Miguel Ángel Treviño Morales (alias “Z-40”), notorious for his brutality, in 2013 by Mexican federal authorities was a second blow to the group. Some analysts date the beginning of the “loss of coherence” of Los Zetas to Lazcano’s killing. According to Mexico’s former attorney general, federal government efforts against the cartels through April 2015 hit Los Zetas the hardest, with more than 30 Los Zetas leaders removed.\footnote{Michael Lohmuller, “Will Pemex’s Plan to Fight Mexico Oil Thieves Work?,” InSight Crime, February 18, 2015; Ian M. Ralby, Downstream Oil Theft: Global Modalities, Trends, and Remedies, Atlantic Council, January 2017.}

Los Zetas are known for their diversification and expansion into various criminal activities, such as fuel theft. According to media coverage, losses by Pemex, Mexico’s state oil company, from siphoned-off oil in recent years have exceeded $3 billion. In 2017, the Atlantic Council released a report estimating that Los Zetas control about 40% of the market in stolen oil. Los Zetas have resisted government attempts to curtail their sophisticated networks.

Although many observers dispute the scope of the territory now held by major Los Zetas factions and how fragmentation influenced the formerly cohesive group’s prospects, most concur that the organization is no longer as powerful as it was during the peak of its dominance in 2011 and 2012. Two rival factions are Cartel del Noreste, a rebranded version of the traditional core of Los Zetas, and the Old School Zetas, known by their Spanish acronym EV. One scholar has characterized how Los Zetas succeeded in spinning off powerful franchises or cells after
leadership decapitation. According to the 2019 NDTA, Los Zetas continue to traffic a range of drugs, including heroin and cocaine, through distribution hubs in Laredo, Dallas, and New Orleans.

**Beltrán Leyva Organization**

Before 2008, the Beltrán Leyva Organization (BLO) was part of the Sinaloa federation and controlled access to the U.S. border in Mexico’s Sonora State. The Beltrán Leyva brothers developed close ties with Sinaloa head El Chapo Guzmán and his family, along with other Sinaloa-based top leadership. The January 2008 arrest of BLO’s leader, Alfredo Beltrán Leyva, through intelligence reportedly provided by Guzmán, triggered BLO’s split from the Sinaloa DTO. The two organizations have remained bitter rivals since.

BLO suffered a series of setbacks at the hands of the Mexican security forces, beginning with the 2009 killing of Arturo Beltrán Leyva, followed closely by the arrest of Carlos Beltrán Leyva. In 2010, the organization broke up when the remaining brother, Héctor Beltrán Leyva, took the remnants of BLO and rebranded it as the South Pacific (Pacifico Sur) Cartel. Another top lieutenant, Edgar “La Barbie” Valdez Villarreal, took a faction loyal to him and formed the Independent Cartel of Acapulco, which he led until his arrest in 2010. The South Pacific Cartel appeared to retake the name Beltrán Leyva Organization and achieved renewed prominence under Hector Beltrán Leyva’s leadership until his arrest in 2014.

Splinter organizations have arisen since 2010, such as the Guerreros Unidos and Los Rojos, among at least five others with roots in BLO. Los Rojos operates in Guerrero and relies heavily on kidnapping and extortion for revenue as well as trafficking cocaine, although analysts dispute the scope of its involvement in the drug trade. The Guerreros Unidos traffics cocaine as far north as Chicago in the United States and reportedly operates primarily in the central and Pacific states of Guerrero, México, and Morelos. The Guerreros Unidos, according to authorities in the Peña Nieto government, murdered 43 Mexican teacher trainees, who were handed to them by local authorities in Guerrero, and then burned their bodies.

Like other DTOs, BLO was believed to have infiltrated the upper levels of the Mexican government for at least part of its history, but whatever reach it once had has likely declined significantly after Mexican authorities arrested many of its leaders. According to the 2019 NDTA,

---

109 See *InSight Crime* profile, “Beltrán Leyva Organization.” The profile suggests that Guzmán gave authorities information on Alfredo Beltrán Leyva to secure the release of Guzmán’s son from prison.

112 According to the profile of Guerreros Unidos on the *InSight Crime* website, an alleged leader of the group is the brother-in-law of the former mayor of Iguala.
BLO splinter factions rely on loose alliances with the CJNG, the Juárez Cartel, and elements of Los Zetas to move drugs across the border.\textsuperscript{113}

**La Familia Michoacana**

Based originally in the Pacific state of Michoacán, La Familia Michoacana (LFM) traces its roots to the 1980s. Formerly aligned with Los Zetas before the group’s split from the Gulf DTO, LFM announced its intent to operate independently from Los Zetas in 2006, declaring that LFM’s mission was to protect Michoacán from drug traffickers, including its new enemies, Los Zetas.\textsuperscript{114} From 2006 to 2010, LFM acquired notoriety for its use of extreme, symbolic violence, military tactics gleaned from Los Zetas, and a pseudo-ideological or religious justification for its existence.\textsuperscript{115} LFM members reportedly made donations of food, medical care, schools, and other social services to benefit the poor in rural communities to project a populist “Robin Hood” image.

In 2010, however, LFM played a less prominent role, and in November 2010, LFM reportedly called for a truce with the Mexican government and announced it would disband.\textsuperscript{116} A month later, spiritual leader and cofounder Nazario “El Más Loco” Moreno González was reportedly killed, although authorities claimed his body was stolen.\textsuperscript{117} The body was never recovered, and Moreno González reappeared in another shootout with Mexican federal police in 2014, after which his death was officially confirmed.\textsuperscript{118} Moreno González had been nurturing the development of a new criminal organization that emerged in early 2011, calling itself the Knights Templar and claiming to be a successor or offshoot of LFM.\textsuperscript{119}

Though “officially” disbanded, LFM remained in operation, even after the 2011 arrest of leader José de Jesús Méndez Vargas (alias “El Chango”), who allegedly took over after Moreno González’s disappearance.\textsuperscript{120} Though largely fragmented, remaining cells of LFM remain active in trafficking, kidnapping, and extortion in Guerrero and Mexico states, especially in the working-class suburbs around Mexico City through 2014.\textsuperscript{121} Observers report that LFM was largely driven out of Michoacán by the Knights Templar, although a group calling itself the New Family Michoacan, La Nueva Familia Michoacana, reportedly has been active in parts of Guerrero and Michoacán. As a DTO, LFM has specialized in methamphetamine production and smuggling, along with some trafficking of other synthetic drugs. It has also been known to traffic marijuana and cocaine and to tax and regulate heroin production.

Knights Templar

The Knights Templar began as a splinter group from LFM, announcing its presence in Michoacán in 2011. Similar to LFM, the Knights Templar began as a vigilante group, claiming to protect the residents of Michoacán from other criminal groups, such as Los Zetas, but in reality it operated as a DTO. The Knights Templar is known for the trafficking and manufacture of methamphetamine, but the organization also moves cocaine and marijuana north. Like LFM, it preaches its own version of evangelical Christianity and claims to have a commitment to “social justice” while being the source of much insecurity in Michoacán and surrounding states.

Frustration with the perceived ineffectiveness of Mexican law enforcement in combating predatory criminal groups led to the birth in Michoacán of autodefensa, or self-defense, organizations, particularly in the Tierra Caliente region in the southwestern part of the state. Composed of citizens from a wide range of backgrounds—farmers, ranchers, businessmen, former DTO operatives, and others—the self-defense militias primarily targeted members of the Knights Templar. Local business owners, who had grown weary of widespread extortion and hyper-violent crime that was ignored by corrupt local and state police, provided seed funding to resource the militias, but authorities cautioned that some of the self-defense groups had extended their search for resources and weapons to competing crime syndicates, such as the CJNG. Despite some analysts’ contention that ties to rival criminal groups are highly likely, other observers are careful not to condemn the entire self-defense movement. They note some gains in the effort to combat the Knights Templar when government security forces were unsuccessful, although conflict between self-defense groups also has led to violence.

The Knights Templar reportedly has emulated LFM’s penchant for diversification. The Knights Templar battled LFM, and by 2012 its control of Michoacán was nearly as widespread as LFM’s had once been, especially by demanding that local businesses pay tribute through hefty levies. The Knights Templar also moved aggressively into illegal mining, such as mining iron ore from illegally operated mines. Through mid-2014, the Knights Templar reportedly had been using Mexico’s largest port, Lázaro Cárdenas, located in the southern tip of Michoacán, to smuggle illicit goods. Analysts and Mexican officials, however, suggest a 2014 federal occupation of Lázaro Cárdenas resulted in an “impasse,” rendering DTOs unable to receive and send shipments.

The Mexican government and self-defense forces delivered heavy blows to the Knights Templar, especially with the confirmed killing in March 2014 of Nazario Moreno González, who led the Knights, and the killing of Enrique Plancarte, another top leader, weeks later. Previously, the self-defense forces and the Knights Templar reportedly had split Michoacán roughly into two, although other criminal organizations continued to operate successfully in the area. In February 2015, the Knights Templar DTO leader Servando “La Tuta” Gómez was captured. The former schoolteacher had taken risks by being interviewed in the media. With La Tuta’s arrest, the fortunes of the Knights Templar plummeted.

122“Mexico Seizes Tonnes of Minerals in Port Plagued by Drug Gangs,” Reuters, March 3, 2014. The Knights Templar shared control with the powerful Sinaloa DTO. Both groups reportedly received shipments of cocaine from South America and precursor chemicals used to produce methamphetamines largely from Asia.

123Interview with Eduardo Guerrero, July 2014.

Cártel Jalisco Nuevo Generación

Originally known as the Zeta Killers, the CJNG made its first appearance in 2011 with a roadside display of the bodies of 35 alleged members of Los Zetas. The group is based in Jalisco State with operations in central Mexico, including the states of Colima, Michoacán, México, Guerrero, and Guanajuato. It has grown into a dominant force in the states of the Tierra Caliente, including parts of Guerrero, Michoacán, and the state of Mexico. The CJNG has early roots in the Milenio Cartel, which was active before 2010 in the Tierra Caliente region.

The CJNG reportedly served as an enforcement group for the Sinaloa DTO until the summer of 2013. Analysts and Mexican authorities have suggested that the split between Sinaloa and the CJNG is one of the many indications of a general fragmentation of crime groups. The Mexican military delivered a blow to the CJNG with the July 2013 capture of its leader’s deputy, Victor Hugo “El Tornado” Delgado Rentería. He was replaced by the current leader, Nemesio Oseguera Cervantes, known as El Mencho. In January 2014, the Mexican government arrested El Mencho’s son, Rubén “El Menchito” Oseguera, believed to be the CJNG’s second-in-command. However, El Menchito, who was released by Mexican judges twice, was rearrested by Mexican authorities and later extradited to the United States in February 2020.

In 2015, the Mexican government declared the CJNG one of the most dangerous cartels in the country. In 2016, the U.S. Department of the Treasury echoed the Mexican government when it described the group as one of the world’s “most prolific and violent drug trafficking organizations.” According to some analysts, the CJNG has operations throughout the Americas, Asia, and Europe. The group is allegedly responsible for distributing cocaine and methamphetamine along “10,000 kilometers of the Pacific coast in a route that extends from the Southern Cone to the border of the United States and Canada.”

To best understand the CJNG’s international reach, it is important to first consider its expansion within Mexico. In 2016, many analysts maintained that the CJNG controlled a territory equivalent to almost half of Mexico. The group has battled Los Zetas and Gulf Cartel factions in Tabasco, Veracruz, and Guanajuato, and it has battled the Sinaloa federation in the Baja Peninsula and Chihuahua. The CJNG’s ambitious expansion campaign has led to high levels of violence, particularly in Ciudad Juárez and Tijuana. The group also has been linked to several mass graves in southwestern Mexico and was responsible for shooting down a Mexican army helicopter in 2015, the first successful takedown of a military asset of its kind in Mexico.

127 Reportedly, the CJNG’s leadership was originally composed of former associates of slain Sinaloa DTO leader Ignacio “Nacho” Coronel, who operated his Sinaloa faction in Jalisco until he was killed by security forces in July 2010.
133 Angel Rabasa et al., Counterwork: Countering the Expansion of Transnational Criminal Networks, RAND
The CJNG’s efforts to dominate key ports on both the Pacific and Gulf Coasts have allowed it to consolidate important components of the global narcotics supply chain. In particular, the CJNG asserts control over the ports of Veracruz, Mazanillo, and Lázaro Cárdenas, which has given the group access to precursor chemicals that flow into Mexico from China and other parts of Latin America. As a result, the CJNG has been able to pursue an aggressive growth strategy underwritten by U.S. demand for Mexican methamphetamine, heroin, and fentanyl.

Despite leadership losses, the CJNG has extended its geographic reach and maintained its own cohesion while exploiting the splintering of the Sinaloa organization. It is considered an extremely powerful cartel, with a presence in 27 of 32 Mexican states in 2020. Its reputation for extreme and intimidating violence continues. The daylight ambush of Mexico City Chief of Police Omar García Harfuch in late June 2020 was preceded by publicized threats that targeted him and Jalisco State Governor Enrique Alfaro. Press reports say the tally of the CJNG’s attacks on Jalisco public officials exceeds 100, including lawmakers, federal, state and local police, soldiers, and Jalisco’s minister of tourism. Notably, the DEA considers the CJNG a top U.S. threat and Mexico’s most well-armed DTO and has offered a $10 million reward for information leading to the arrest of El Mencho, who is believed to be hiding in the mountains of Jalisco, Michoacán, and Colima. He is a former police officer who once served time for heroin trafficking in California. The CJNG was the target of a major DEA operation in March 2020 that resulted in some 600 arrests.

**Fragmentation, Competition, and Diversification**

As stated earlier, DTOs today are more fragmented and more competitive than in the past. However, analysts disagree about the extent of this fragmentation, its importance, and whether the group of smaller organizations will be easier to dismantle. Fragmentation that began in 2010 and accelerated in 2011 redefined the “battlefield” and brought new actors, such as Los Zetas and the Knights Templar, to the fore. In 2018, an array of smaller organizations were active, and some of the once-small groups, such as the CJNG, entered the space left after other DTOs were dismantled. Recently, some analysts have identified the CJNG as a cartel with national reach like the Sinaloa DTO, although it was originally an allied faction or the armed wing of Sinaloa organization.

A newer cartel, known as Los Cuinis, was identified as a major organization in 2015. In April 2015, the U.S. Department of the Treasury’s Office of Foreign Assets Control (OFAC) named both the CJNG and Los Cuinis as Specially Designated Narcotics Traffickers under the Foreign Narcotics Kingpin Designation Act. According to an OFAC statement, the Los Cuinis DTO has become “one of the most powerful and violent drug cartels in Mexico.” Other analysts view the fragments as the cause of heightened violence but note that groups appear less able to challenge the national government and engage in some types of transnational crimes, including drug trafficking.

---

135 Bonello, “After Decade-Long Drug War.”
Contrary to the experience in Colombia in the 1980s and 1990s, with the sequential dismantling of the enormous Medellín and Cali cartels, fragmentation in Mexico has been associated with resurging violence. A kingpin strategy implemented by the Mexican government has incapacitated numerous top- and mid-level leaders in all the major DTOs either through arrest or deaths in arrest efforts. However, this strategy contributed to violent succession struggles, shifting alliances among the DTOs, a proliferation of new gangs and small DTOs, and the replacement of existing leaders and criminal groups by even more violent ones.

The ephemeral prominence of some new gangs and DTOs, regional changes in the power balance among different groups, and shifting allegiances often catalyzed by government enforcement actions make elusive an accurate portrait of the current criminal landscape. As noted earlier, in the last months of 2019, almost all the investigations of flagrant incidents of violence involving the DTOs in Sinaloa State, the Tierra Caliente region, and the Mexican border states were committed by fragments of formerly cohesive criminal groups. Diversification of the DTOs and their evolution into poly-crime outfits may be evidence of organizational vitality and growth. Others contend that diversification signals that U.S. and Mexican drug enforcement measures are cutting into profits from drug trafficking or constitutes a response to shifting U.S. drug consumption patterns, such as legalization of marijuana in some U.S. states (and Canada) and a large increase in demand for plant-based and synthetic opioids.

**Outlook**

The goal of successive Mexican governments has been to diminish the extent and character of the DTOs’ activity from a national security threat to a law-and-order problem and, once this is achieved, to return responsibility for addressing this challenge from military forces back to the police. Former President Peña Nieto did not succeed in his stated objective to reduce the scope of the military’s role in domestic policing, and military enforcement activities led to serious allegations of torture and human rights abuses. Current President López Obrador decided to continue a militarized policing strategy. He authorized a continuation of Mexican armed forces in domestic law enforcement through the remainder of his tenure. The National Guard he began deploying in July 2019 has had, thus far, fewer abuse allegations than the military. The López Obrador government continues to face DTO-related corruption charges against public officials, politicians, and members of the nation’s police forces. As of mid-2020, López Obrador’s campaign pledges to carry out broader anti-corruption efforts have not been fully implemented.

---

138 In Colombia’s case, successfully targeting the huge and wealthy Medellín and Cali cartels and dismantling them meant that a number of smaller DTOs (cartelitos) replaced them. The smaller organizations have not behaved as violently as the larger cartels, and thus the Colombian government was seen to have reduced violence in the drug trade. However, there were critical factors in Colombia that were not present in Mexico, such as the presence of guerrilla insurgents and paramilitaries that became deeply involved in the illegal drug business. Some have argued that the Colombian cartels of the 1980s and 1990s were structured and managed very differently than their contemporary Mexican counterparts.

139 Morris Panner, “Latin American Organized Crime’s New Business Model,” ReVista, vol. 11, no. 2 (Winter 2012). The author comments that “the business is moving away from monolithic cartels toward a series of mercury-like mini-cartels. Whether diversification is a growth strategy or a survival strategy in the face of shifting narcotics consumption patterns, it is clear that organized crime is pursuing a larger, more extensive agenda.”

As discussed in this report, the splintering of the large criminal organizations has led to increased violence. The demise of the traditional kingpins, envisioned as ruling their cartel armies in a hierarchical fashion from a central position, has led to equally violent, smaller, highly fractured groups.\textsuperscript{142} The central states of Jalisco, Colima, and Guanajuato, where criminal markets were in flux, saw Mexico’s most intense violence in 2019 and into early 2020. Two causes of the current violence may be the decline of Sinaloa Cartel’s dominance and the heightened competition to profit from the increasing production and distribution of heroin and synthetic opioids and methamphetamine. Some observers remain convinced of the capacity of both the Sinaloa organization and its primary competitor, the expansive CJNG, to retain significant power using their well-established bribery and corruption networks backed by violence.

Many U.S. government officials and policymakers have concerns about the Mexican government’s capacity to reduce violence in Mexico or curb the power of the DTOs. Many analysts have viewed a continued reliance on the kingpin strategy, which they argue has not lowered violence in a sustainable way, as problematic. Some analysts back a new strategy of targeting the middle operational layer of each major criminal group to handicap the groups’ regeneration capacity.\textsuperscript{143} Other structural factors that plague Mexico’s struggle for security and stability include very high criminal impunity and continued high demand for drugs from the United States and Europe.

\textsuperscript{142} Patrick Corcoran, “Why Are More People Being Killed in Mexico in 2019?,” \textit{InSight Crime}, August 8, 2019.

Appendix. Drug Trafficking in Mexico and Government Efforts to Combat the DTOs

Drug trafficking organizations (DTOs) have operated in Mexico for more than a century. The DTOs can be described as global businesses with forward and backward linkages for managing supply and distribution of all manner of narcotics in many countries. As businesses, their goal is to bring their product to market in the most efficient way to maximize their profits.

Mexican DTOs are the major wholesalers of illegal drugs in the United States and are increasingly gaining control of U.S. retail-level distribution through alliances with U.S. gangs. Their operations, however, are markedly less violent in the United States than in Mexico, despite their reportedly significant presence in many U.S. jurisdictions.

The DTOs use bribery and violence as complementary tactics. Violence is used to discipline employees, enforce agreements, limit the entry of competitors, and coerce. Bribery and corruption help to neutralize government action against the DTOs, ensure impunity, and facilitate smooth operations. The proceeds of drug sales (either laundered or as cash smuggled back to Mexico) are used in part to corrupt U.S. and Mexican border officials. Mexican law enforcement, security forces, and public officials tend to either ignore DTO activities or actively support and protect the DTOs. Mexican DTOs advance their operations through widespread corruption. When corruption fails to achieve cooperation and acquiescence, violence is the ready alternative.

The relationship of Mexico’s drug traffickers to the government and to one another is rapidly evolving, and any snapshot (such as the one provided in this report) must be continually adjusted to current realities. In the early 20th century, Mexico was a source of marijuana and heroin trafficked to the United States, and by the 1940s, Mexican drug smugglers were notorious in the United States. The growth and entrenchment in Mexico of drug trafficking networks occurred during a period of one-party rule by the Institutional Revolutionary Party (PRI), which governed the country for 71 years. During that period, the government was centralized and hierarchical, and, to a large degree, it tolerated and protected some drug production and trafficking in certain regions of the country, even though the PRI government did not generally tolerate crime.

Mexico is a longtime recipient of U.S. counterdrug assistance, but cooperation was limited between the mid-1980s and the mid-2000s due to U.S. distrust of Mexican officials and Mexican sensitivity about U.S. involvement in the country’s internal affairs. Numerous accounts maintain that for many years, the Mexican government pursued an overall policy of accommodation of DTOs. Under this system, arrests and eradication of drug crops took place, but due to the effect of widespread corruption, the system was “characterized by a working relationship between Mexican authorities and drug lords” through the 1990s.

The system’s stability began to fray in the 1990s, as Mexican political power decentralized and the push toward democratic pluralism began, first at the local level and then nationally with the election of National Action Party candidate Vicente Fox as president in 2000. The process of

democratization upended the equilibrium that had developed between state actors (such as the Federal Security Directorate, which oversaw domestic security from 1947 to 1985) and organized crime. No longer were certain officials able to ensure drug traffickers’ impunity to the same degree and to regulate competition among Mexican DTOs for, or plazas. To a large extent, DTO violence directed at the government appears to be an attempt to reestablish impunity, whereas the inter-cartel violence seems to be an attempt to establish dominance over specific drug trafficking plazas. The intra-DTO violence (or violence inside the organizations) reflects a reaction to suspected betrayals and the competition to succeed killed or arrested leaders.

Other transformations of the drug trade took place during the 1980s and early 1990s. As Colombian DTOs were forcibly broken up, Mexican traffickers gradually took over the highly profitable traffic in cocaine to the United States. Intense U.S. government enforcement efforts led to the shutdown of the traditional trafficking route used by the Colombians through the Caribbean. As Colombian DTOs lost this route, they increasingly subcontracted the trafficking of cocaine produced in the Andean region to the Mexican DTOs, which they paid in cocaine rather than cash. These already-strong Mexican organizations gradually took over the cocaine trafficking business, evolving from being mere couriers of cocaine for the Colombians to being the wholesalers they are today.

As Mexico’s DTOs rose to dominate the U.S. drug markets in the 1990s, the business became even more lucrative. This shift raised the financial stakes, which encouraged the use of violence in Mexico to protect and promote market share. The violent struggles among DTOs is now over strategic routes and warehouses where drugs are consolidated before entering the United States, reflecting these higher stakes.

Former President Felipe Calderón (2006-2012) made an aggressive campaign against criminal groups, especially the large DTOs, the central focus of his administration’s policy. He sent several thousand Mexican military troops and federal police to combat the organizations in drug trafficking “hot spots” around the country. His government made some dramatic arrests, but few of the captured kingpins were convicted. Between 2007 and 2012, as part of much closer U.S.-Mexican security cooperation, the Mexican government significantly increased extraditions to the United States, with a majority of the suspects wanted by the U.S. government on drug trafficking and related charges. The number of extraditions grew through 2012 and remained steady during President Enrique Peña Nieto’s term (2012-2018). A consequence of the militarized strategy used in successive Mexican administrations was an increase in accusations of human rights violations against the Mexican military, which was largely untrained in domestic policing.

According to a press investigation of published Mexican government statistics, Mexican armed forces injured or killed some 3,900 individuals in their domestic operations between 2007 and 2014, labeled by the military civilian aggressors. According to the report, the government data did not explain the high death rate (about 500 were injuries and the rest killings) or specify which of the military’s victims were armed and which were bystanders. (Significantly, the military’s role in injuries and killings ceased to be made public after 2014, according to the account.)

Few incidents of suspected police and security force torture are reported in Mexico (less than 10%), according to several estimates, in large part because of a belief that nothing will be done. Impunity for military and police is likely to follow an established pattern of high levels of impunity for most crimes. Judicial and policing weaknesses have allowed about a 95% impunity

149 Fisher and McDonnell, “Mexico Sent in the Army to Fight the Drug War.”
level for the resolution of crimes on average. For decades, roughly 90% of crimes in Mexico have gone unreported, while of those crimes that are reported only 4%-6% of the total reach conclusion adequately.\(^{150}\)

Peña Nieto pledged a new direction in his security policy to focus more on reducing criminal violence that affects civilians and businesses and less on removing the leaders of the large DTOs. Ultimately, that promise was not met. His attorney general, Jesús Murillo Karam, said in 2012 that Mexico faced challenges from some 60-80 crime groups, a proliferation he attributed to his predecessor Calderón’s kingpin strategy.\(^{151}\) However, despite Peña Nieto’s pledge to alter his approach, analysts found considerable continuity between the strategies of Calderón and Peña Nieto.\(^{152}\) The Peña Nieto government recentralized control over security and continued the strategy of taking down top drug kingpins, adopting Calderón’s list of top trafficker targets, updated as needed. Significantly, the resulting fragmentation has continued to splinter Mexico’s criminal groups with attendant violence and instability.\(^{153}\)

Following some reorganization, Peña Nieto continued cooperation with the United States under the Mérida Initiative begun during Calderón’s term. The Mérida Initiative, a bilateral anticrime assistance program launched in 2008, initially focused on providing Mexico with hardware, such as planes, scanners, and other equipment, to combat the DTOs. The Peña Nieto government continued the Mérida programs. However, the focus on crime prevention, which received significant attention early in his term, ended prematurely due to budget cutbacks.\(^{154}\)

President Andrés Manuel López Obrador, who took office in 2018, pledged to make Mexico a more just and peaceful society and vowed to govern with austerity. López Obrador made broad promises to fight corruption and reduce violence, build infrastructure in southern Mexico, revive the state oil company, and promote social programs.\(^{155}\) Given the oil price collapse in early 2020, fiscal constraints, rising violence, and significant health effects and projected severe recession linked to the Coronavirus Disease 2019 (COVID-19) pandemic, many observers question whether his goals are attainable.\(^{156}\)

López Obrador launched a new presidential commission to coordinate the investigation of a high-profile, unsolved case from 2014 in which a drug cartel allegedly murdered 43 youth in Guerrero state. In June 2020, arrest warrants were issued for more than 40 municipal officials in Guerrero after years of flawed investigations.\(^{157}\) López Obrador has remained popular, although his denial that homicide levels have continued to increase and his criticism of the press for not providing more positive coverage have raised concerns. Some analysts question his commitment to combat

\(^{152}\) Vanda Felbab-Brown, *Changing the Game or Dropping the Ball? Mexico’s Security and Anti-Crime Strategy Under President Peña Nieto*, Brookings Institution, November 2014. Velbab-Brown maintains that the government of Peña Nieto “largely slipped into many of the same policies of President Felipe Calderón.”

\(^{154}\) With the sharp oil price declines in 2014 onward, the administration was forced to impose budget austerity measures, including on aspects of security. See CRS In Focus IF10578, *Mexico: Evolution of the Mérida Initiative, 2007-2020*, by Clare Ribando Seelke.

corruption and to curb Mexico’s persistent organized-crime-related violence. During his presidential campaign, López Obrador said he would consider unconventional approaches, such as legalization of some drugs. However, several observers maintain that the administration has not issued an effective or comprehensive security policy to combat the DTOs (beyond measures to deter vulnerable youth from crime).158
